Abstract

Three mud eel specimens obtained from the central coast of Sinaloa, Mexico, were identified as *Pythonichthys asodes* and compared with type material. Its previously known northern distribution limit was extended by 11 latitude degrees (ca. 2700 km of coastline), from El Salvador to the entrance of the Gulf of California. The individuals examined are the only mud eel specimens known from Mexico.

Keywords

Pythonichthys asodes, Pacific mud eel, range extension, geographical distribution, Gulf of California, Sinaloa, eastern Pacific.
