

**RMIT University**

# 2022 Graduation

**Melbourne**  
**AUSTRALIA**

Artwork 'Luwaytini' by Mark Cleaver, Palawa

# Chancellor's Welcome

Well done!

On behalf of the Council of RMIT University, it is my privilege to congratulate you, our new graduates.

RMIT is an international university of technology, design and enterprise. We empower people and communities to adapt and thrive across generations, through lifelong education, applied research and meaningful civic engagement.

As our most recent graduates, you have a wonderful opportunity ahead and the knowledge, skills and networks to make your aspirations reality. From the moment you put your education in our hands, our mission was to prepare you for the evolving world of work. The next step is yours to take.

We hope that, throughout your careers, you will find opportunities to contribute the expertise you have developed to the betterment of the world. Education changes lives, and that is in no small part the result of the way the educated choose to apply themselves.

I hope you will join with me as ambassadors for RMIT and that you stay connected with our growing community around the world.

A handwritten signature in black ink that reads "Peggy O'Neal".

Peggy O'Neal AO  
Chancellor  
RMIT University

# Vice-Chancellor's Welcome

## Congratulations

On behalf of the RMIT University community, it is my great pleasure to congratulate you on the significant achievement of reaching your Graduation.

It takes resilience and determination to complete tertiary education – you deserve to feel immensely proud.

In complex times you have demonstrated your readiness to take the next step in your career journey and to contribute in your chosen field. The world needs people like you who are adaptive and well prepared for a changing world.

May your journey with RMIT stand you in strong stead and, remember, you are always welcome back. These days we know that our education is lifelong, and it is a privilege to have our graduates return time and again.

Thank you also to the great many parents, family and friends who have provided much needed support along the way. Education change lives for generations to come, so your contribution is far reaching.

I wish our new alumni success and happiness in the years ahead.

A handwritten signature in black ink that reads "Alec Cameron".

Professor Alec Cameron  
Vice-Chancellor and President  
RMIT University

# Academic Registrar's Message

Graduation is an  
exceptional achievement

**Well done to all of our RMIT graduates!**

Graduation marks the attainment of a significant milestone in a person's life. The conferral of your award today is testament to your skills and determination to succeed in your chosen field of study. Following years of dedication, including through the most challenging of times, you have successfully achieved your goal; you are now ready to begin your next chapter in life and work.

On behalf of the RMIT University community, I wish you every success in your future endeavours; I am certain you will go on to accomplish a great many things.

A handwritten signature in black ink, appearing to read 'Merlino'.

Connie Merlino  
Academic Registrar  
RMIT University

# Welcome to Country Acknowledgement of Country

## INDIGENOUS AUSTRALIAN WELCOME TO COUNTRY AND ACKNOWLEDGEMENT OF COUNTRY PROTOCOLS

A **Welcome to Country** is a ceremony performed by Australian traditional custodians to welcome visitors and offer them safe passage onto their traditional land. It can take many forms, including singing, dancing, smoke ceremonies or a speech, depending on the particular culture of the traditional custodians. More than 60,000 years ago, Aboriginal and Torres Strait Islander groups had clear boundaries separating their Country from that of other clans. Crossing into another clan's Country required a request for permission to enter. A Welcome to Country provided this permission. While visitors were provided with safe passage, they also had to respect the protocols and rules of the land owner clan while on their Country.

The **Acknowledgement of Country** involves visitors acknowledging and respecting the original Indigenous custodians of the land and their long and continuing relationship with their Country. An Acknowledgement of Country can be formal or informal and, unlike a Welcome to Country, can be delivered by a non-Indigenous person.

A Welcome to Country and/or an Acknowledgement of Country is about honouring the First Australians' connection to country. For Indigenous Australian cultures the meaning of Country incorporates more than just ownership or occupation of land.

## RMIT ACKNOWLEDGEMENT OF COUNTRY

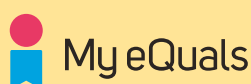

RMIT University acknowledges the people of the Woi wurrung and Boon wurrung language groups of the eastern Kulin Nation on whose unceded lands we conduct the business of the University. RMIT University respectfully acknowledges their Ancestors and Elders, past and present. RMIT also acknowledges the Traditional Custodians and their Ancestors of the lands and waters across Australia where we conduct our business.

# Doctoral Citations

RMIT University acknowledges the Wurundjeri people of the Kulin Nation as the traditional owners of the land on which the University stands. RMIT University respectfully recognises Elders both past and present.

## Digital Academic Statements

Once you graduate you can securely access and safely share certified, digital versions of your RMIT transcript and other academic statements via My eQuals.

Find out more at [rmit.edu.au/digital-academic-statements](https://rmit.edu.au/digital-academic-statements)

### Muhammad Abbas

#### *Doctor of Philosophy*

Dr Abbas explored the practice of community policing in Pakistan. The research revealed that it promotes police legitimacy, public trust and local ownership. The findings enhance our understanding that community policing is the most effective strategy in post-conflict and fragile states seeking to build sustainable security, social well-being and development.

### Fairuz Abd Hakim

#### *Doctor of Philosophy*

Dr Abd Hakim investigated the effect of employee engagement in the co-creation process from the lens of Service-Dominant logic and its impacts on their psychological contract, enabling their voice and leading to retention. From the view of internal marketing, the development and retention of talent require attention.

### Kourosh Abdollahi

#### *Doctor of Philosophy*

Dr Abdollahi investigated the nature of molecular interactions between proteins and phenolic compounds. The research revealed that such interactions remarkably affect the physicochemical properties of the proteins as well as the bioavailability of phenolic compounds. These findings allow the industry to develop novel food and supplement formulations.

### Faith Oyetola Aboyeji

#### *Doctor of Philosophy*

Dr Aboyeji examined the international copyright system from a human development perspective to make a case for improved access to knowledge globally. The research found that strong copyright protection adversely affects access to knowledge and human development in education and health. Specific recommendations for legal and institutional reforms were made.

### Andoh Michael Afful

#### *Doctor of Philosophy*

Dr Afful investigated the use of space science education to inspire the next generation of space sector professionals. He conducted extensive surveys and interviews of both academics and students to explain the importance of space science integration in higher education. These findings contribute to the future of space science instruction in Australia.

### Asma Akther

#### *Doctor of Philosophy*

Dr Asma Akther investigated the response of high frequency waves for haptic feedback and particle manipulation. The research revealed that the microfluidic actuation platform can be used for tactile actuators as well as nanoparticle manipulation. The SAW-concentrated submicron/nanoparticles enhanced the sensitivity of biosamples/particles used for detecting ions in drinking water.

### Moosa Jaffar Ali Al Lawati

#### *Doctor of Philosophy*

Dr Al Lawati explored the use of social media in journalistic practice in the Middle Eastern context through the case of Oman. The research examined the influences on news production and citizen journalism. The findings enhance the understanding of newsroom routines, and the popularity of social media in news-making behaviours.

### Majed Awad M Alanazi

#### *Doctor of Philosophy*

Dr Majed Alanazi explored emergency department nurses' experiences with disaster drills in Saudi Arabia. The significance of this research lies in developing a tool to measure disaster drills knowledge and skills and finding emergency department nurses were moderate to high in their perceptions of disaster preparedness.

### Hassan Muslih F Albarakati

#### *Doctor of Philosophy*

Dr Albarakati assessed and investigated the daily CBCT dose and radiomics for lung cancer radiotherapy. The research revealed that the daily CBCT dose was small compared to the difference among planning techniques. The investigated radiomics have shown promise for predicting outcomes in patients receiving radiotherapy for lung cancer.

### Abdulaziz Khalid A Aldiab

#### *Doctor of Philosophy*

Dr Aldiab investigated the possibility of applying eLearning concepts in higher education in Saudi Arabia by determining eLearning fundamental parameters categorising into two main groups: eLearning Attributes (EA) and eLearning Tools (ET). A mathematical interdependence equation was then developed using determined parameters to evaluate eLearning efficacy.

**Misfer Saeed A Aldosari***Doctor of Philosophy*

Dr Aldosari studied group web search for places and travel information. The results revealed details about its prevalence, behaviours, settings, and issues. He also explored utilising some features of social tools to facilitate this kind of search. This research provides insight into understanding collaborative search and improving user experience.

**Aishah Alenezi***Doctor of Philosophy*

Dr Alenezi explored the quality of life among ostomy patients and identified nurses' ostomy care confidence level in knowledge and skills in the Kingdom of Saudi Arabia. The research revealed issues associated with stoma creation among Saudi people and contributes to nursing care which supports reduction of predictable problems.

**Ebtsam Khalefah Alenezy***Doctor of Philosophy*

Dr Alenezy developed a room temperature hydrogen gas sensor. The patented technology is currently being tested in USA as a potential safety alert device in aerospace sector that employs hydrogen fuel cell technology. The secret? A unique assembly of nanomaterials that is activated by light.

**Jason Alexandra***Doctor of Philosophy*

Dr Alexandra examined the politics of climate adaptation in Australia's Murray–Darling Basin. His research identified systemic challenges for governments and communities, and provides insight into the way climate change increases risk and uncertainty. The findings confirm that more adaptive governance requires far-reaching institutional and policy reforms.

**Ebtesam Abraheem A Alghamdi***Doctor of Philosophy*

Dr Alghamdi investigated effectiveness of project-based learning in the context of first and final year Computer Science and IT courses. The research proposes recommendations for best practice when utilising this approach. The findings provide insight into important factors to consider when implementing PBL and how these factors impact academic performance.

**Younis Salim Saed Al-Husaini***Doctor of Philosophy*

Dr Alhusaini explores the relationship between Law Enforcement Agencies and Cloud Service Providers to determine whether there are effective measures in place to enable and support cloud forensic investigations. The thesis provides deep insight into a complex pragmatic problem in the management of legal and criminal risk in one jurisdiction. Oman as a case study.

**Mehwish Ghulam Ali***Doctor of Philosophy*

Dr Ali developed a novel measure for son preference by comparing parents' observed behaviours and stated preferences. The novel measure explains the higher than desired fertility and gender gaps in multidimensional poverty in Pakistan. Specific policy initiatives which consider the timing and nature of son preference are recommended.

**Ali Hamdi Fergani Ali***Doctor of Philosophy*

Dr Ali researched computer vision to produce efficient and effective visual representation learning for object tracking and image classification. The research produced novel algorithms for drone-based moving objects tracking and image classification tasks considering limited training data. The outcomes advanced the representation learning using graphs for better visual understanding.

**Hilal Hussain B Ali***Doctor of Philosophy*

Dr Ali explored social media use by Saudi women entrepreneurs to create space, place and legitimacy for their businesses. The women use social media to overcome cultural constraints on their space to create a virtual business space. These findings expand the body of knowledge on women's entrepreneurship.

**Natalie Alima***Doctor of Philosophy*

This study explores the affordances of mycelium to creating new aesthetics in architectural biodesign. Contrarily to current practices, the findings reveal that critical benefits arise from the fungus's volatility, unpredictability, and problem-solving capacities, characteristics that are commonly suppressed. These findings opens new pathways and methodologies for designing with non-human species.

**Turki Abdullah Alkathiri***Doctor of Philosophy*

Dr Alkathiri investigated various nonlayered materials including oxide and oxysulphide materials and delaminated their ultrathin 2D planar from bulk counterparts using liquid metal and liquid phase exfoliation revealing novel materials for gas sensing. This work will demonstrate the strong potential of the exfoliated oxysulphide-based materials for high-performance gas sensing devices.

**Mohammed Nawar Alnemer***Doctor of Philosophy*

Dr Alnemer investigated how macroeconomic variables in both emerging and developed economies affected stock prices. The study found that some macroeconomic variables may interact with one another to explain stock prices. The findings confirm that some macroeconomic variables affect stock prices in emerging economies differently from developed economies.

**Mansour Alobaisi***Doctor of Philosophy*

Dr Alobaisi examined the speech act of compliments in Hijazi Saudi Arabic. The research focused on the influence of the evil eye belief on complimenting behaviour among the Hijazi Saudi Community. The study employed mixed methods to reveal important differences in compliment behaviour among Saudi speakers.

**Saeed Hussain Alqahtani***Doctor of Philosophy*

Dr Alqahtani investigated the effect implementing KAMs on audit reports. This study explores how KAMs can help narrow the AEG and enhance audit quality through regulatory intervention, as viewed by key stakeholders in KSA. The main findings indicate that KAMs narrows the AEG but does not improve overall audit quality.

**Sumayyah Alsulami***Doctor of Philosophy*

Dr Sumayyah Alsulami investigated the representations of cultures in English as a Foreign Language (EFL) in Saudi 'special edition' textbooks used at the tertiary level in order to understand and explain to what extent these textbooks promote national identity and intercultural awareness which they contribute to the Saudi national projects.

**Ian Anderson***Doctor of Philosophy*

Dr Anderson researched the Victorian Socialists, an electoral coalition, to find what the group tells us about contemporary political communication and organisation. Anderson conducted participant observation, interviews, and media analysis. The research indicates that digital media is necessary but insufficient for 21st-century political communication and the formation of publics.

**Stephanie Andrews***Doctor of Philosophy*

Dr Andrews researched the use of non-naturalistic depiction of spatial environments in immersive virtual reality, focusing on the creative use of stereoscopic techniques. Her work consists of a series of VR artworks using her new compositional strategy called The Depth Object.

**Javed Anwar***Doctor of Philosophy*

Dr Anwar explored policy texts, interviews and field observations to develop an innovative analytical approach entitled postcolonial Islamic governmentality. The findings indicate that a top-down approach and marginal involvement of women in policy processes means that girls in Balochistan are unable to access quality education in primary school and beyond.

**Chalisa Apiwathasorn***Doctor of Philosophy*

Dr Apiwathasorn studied development of anti-mosquito textiles from Z. Limonella essential oil. The research has found that essential oil can be applied onto textiles via knife-coating method, granting the textiles with excellent performance in mosquito repellence. Success in developing such textile has made a significant contribution to vector-borne diseases prevention.

**Garry William Argent***Doctor of Philosophy*

Dr Argent studied the neoliberal foundation skills education policy apparatus in Australia. The research found that the foundation skills learner carries a burden to navigate marketised training environments and changing labour markets as an individual responsible consumer. The findings take debates on neoliberal education into the realm of foundation skills.

**Oliver Anderson Armstrong***Doctor of Philosophy*

Dr Armstrong investigated the language and techniques of evaluation for Australian public spaces. The findings suggest that appropriate evaluation methodologies for contemporary public space design emerge critically from the project ecologies themselves. The research demonstrates the powerful role language plays in promoting and sustaining the public interest in innovative urbanism.

**Kathryn Arnold***Doctor of Philosophy*

Dr Arnold investigated the affordances and constraints impacting the introduction of a targeted teaching approach to mathematics in the early primary years. Practitioner research informed a case study of the factors influencing teachers' adoption of this approach. The findings show the impact of teachers' beliefs on their adoption of reform.

**Barbara Anna Aronson***Doctor of Philosophy*

Dr Aronson explored what constitutes critical knowledge within a design practice and how this can be conveyed during succession in creative leadership. Through an examination of the work of Shlomo Aronson Architects, this research offers an understanding of pivotal practice knowledge and provides a framework for its transferal and creative growth.

**Mark Ashcroft***Doctor of Philosophy*

Dr Ashcroft investigated innovation implementation practices in public hospitals in Victoria, Australia. This study focused on informality as a critical resource capability in that setting. This led to the identification of critical informal factors. Specific implementation practice and policy initiatives are suggested for the effective implementation of innovations in healthcare.

**Kashifa Aslam***Doctor of Philosophy*

Dr Aslam explored Islamophobia in Australian media. The research assessed how acts of violence infringe on human rights. Digital ethnography and lived experiences of being Muslim offered ways to engage with complex interactions on social media. The findings enhance our understandings of support networks for Muslim women and their supporters.

**Danielle Charlotte Atherton***Doctor of Philosophy*

Dr Atherton investigated the opinions of parents, students and teachers on the phenomena of bullying and bullying interventions. The research provided a number of theoretical and practical approaches to interrupting the cycle of bullying and established a solid foundation for future policy development and an adapted bullying intervention program.

**Abigael Wohing Ati***Doctor of Philosophy*

Dr Ati explored the effects of contextual and cultural factors on Participatory Evaluation in Indonesia. Analysing the interactions with the key stakeholders, the findings demonstrate the crucial importance of nuanced understanding of culture, context and the practitioner's own positionality for Participatory Evaluation to succeed.

**Gayatri Bagree***Doctor of Philosophy*

Dr Bagree investigated the role of alpha synuclein protein in neurological disorders. The research revealed that alpha synuclein is toxic to other proteins. This knowledge was used to develop a sensing platform for detection of different alpha synuclein conformers. The outcomes show promise in early diagnosis of neurological disorders.

**Yutao Bai***Doctor of Philosophy*

Dr Bai explored new experimental paradigms of chemobehavioural phenotyping in aquatic toxicology. This research developed a hardware and software framework for automated laboratory high-throughput neuro-behavioral studies utilising small aquatic organisms. The methodologies presented in this research provided a novel avenue for the development of quantitative neurobehavioural applications.

**Nardev Kumar Bajaj***Doctor of Philosophy*

Dr Nardev developed novel catalysts and methods to convert and decompose greenhouse gases into high-value-added products (Hydrogen and carbon). The findings of this research will help us reduce emissions of harmful and toxic gases into the environment and provide an alternative energy source to reduce our dependency on fossil fuels.

**Piyumi Dinusha Balapitiya Liyanage***Doctor of Philosophy*

Dr Liyanage investigated the interaction of DNA aptamers with enzyme-mimic nanoparticles, a key aspect that influences the performance of nanosensors. The research revealed the key determinants influencing nano-bio interactions. This knowledge was used to design nanosensors for detecting ampicillin in milk. The outcomes will allow rational design of sensing systems.

**Juan Fernando Balarezo Serrano***Doctor of Philosophy*

Dr Balarezo studied the network security in software defined networks. The research focused on the mathematical modelling of distributed denial of service attacks in software defined networks and their implementation in a real testbed scenario. The findings enhance the understanding of the attacks and improve the performance of detection systems.

**Paul Banda***Doctor of Philosophy*

Dr Banda's research focused on improving building energy prediction under limited data by leveraging knowledge learnt from the same and different buildings with adequate data. A hybrid deep learning model was developed, which enhanced building prediction under limited data. Building managers and energy suppliers can now accurately predict energy consumption.

**Dingwen Bao***Doctor of Philosophy*

Dr Bao researched the performance-driven digital design and robotic fabrication based on topology optimisation and multi-agent system to seek intricate forms in architectural design and efficient use of materials based on structural performance in the process of generating complex geometries of buildings and their various elements.

**Joanne Susan Barker***Doctor of Philosophy*

Dr Barker examined perceptions of value and evaluation practices in an international scholarship program, using an Australian government-funded program as a case study. Findings underline the importance of evaluation which transcends awardee 'success stories' and incorporates comprehensive stakeholder engagement. Two practical tools are proposed to enhance international scholarship program evaluation.

**Turki Khalid Bawazir***Doctor of Philosophy*

Dr Bawazir investigated usage patterns of e-government services, identified their determining factors, and modelled relationships between usage and outcomes of e-government services from a user perspective in the Kingdom of Saudi Arabia. This study provides empirical evidence to enhance e-government decision-making in delivering open, accountable, trusted and transparent digital services.

**Monaire Ali Baweshkha***Doctor of Philosophy*

Dr Baweshkha investigated the integration of the Project Management Office and Organisational Change Management for the successful delivery of e-health strategic plan in Saudi Arabia. The thesis identified the challenges in implementing e-health strategic plan and provided recommendations and proper solutions through building the right governance and organisational structure.

**Danielle Alyce Baxter***Doctor of Philosophy*

Dr Baxter explored the feasibility of combining muscle energy technique (MET) and pulmonary rehabilitation for people with chronic obstructive pulmonary disease. Trial recruitment was successful, and MET was tolerated well and viewed favourably by participants. The findings enhance our understanding of participant and staff experiences of a manual therapy trial.

**Seregius Be-Ere***Doctor of Philosophy*

Dr Be-Ere assessed the impact of Ghana's decentralisation on pro-poor development in two districts. The study established that decentralised development programmes are limited, untargeted and elitist. The findings challenged the conventional view of decentralisation and demonstrates that a genuine devolution of powers and resources is critical to pro-poor grassroots development.

**Sabrina Anderson Beker***Doctor of Philosophy*

Dr Beker investigated the use of tailored carbon-based nanoparticles on the catalytic remediation of dyes in water. The research revealed a technology able to treat dye-containing water efficiently while minimising environmental impacts. These findings provide new solutions and enhance the understanding on the removal of pollutants from the environment.

**Katherine Ann Berthon***Doctor of Philosophy*

Dr Berthon investigated the influence of greenspace design on plant-insect interactions in urban areas. Her research provides recommendations on which plants native pollinators prefer and how to use strategic site design and placement of new greenspaces to maximise pollinator diversity including: use of 'native' plants, and planting for seasonal complementarity.

**Minghao Bi***Doctor of Philosophy*

Dr Bi developed new techniques to generate structurally efficient forms suitable for digital fabrication. The research examined the characteristics of various advanced manufacturing technologies and considered their manufacturing constraints within the design frameworks. The findings lead to manufacturing-ready designs with enhanced quality and efficiency.

**Kieran Michael Boland***Doctor of Philosophy*

Dr Boland investigated contemporary voice transmission in relation to the smartphone as a generative strategy for a video art practice. Algorithms behind the smartphone are set to listen by default and constitute a new form of spectrality, comparable to the omnipresent role of the offscreen voice in film sound theory.

**Andrew Paul Brough***Doctor of Philosophy*

Dr Brough developed a self-regulation framework for exploring the idiosyncratic nature of entrepreneur journeys over time. The research showed that analysis of cycles of self-regulation depletion and recovery reveal lead indicators of performance and wellbeing challenges. The findings can help entrepreneurs be more effective in pursuit of their goals.

**Rita Budiman***Doctor of Philosophy*

Dr Budiman explored the use of video logs by Indonesian marriage migrants. The research revealed that vlogs are an important medium for these women in defining a sense of home. The findings improve understanding of relations between digital media and everyday life at a time of increasing global displacement.

**Chaminda Bandara Bulumulla***Doctor of Philosophy*

Dr Bulumulla developed a novel computer simulation framework for modelling social simulations, combining research in cognitive reasoning and social influencing. The framework is used to capture different aspects of human behaviour. Applied to large-scale evacuation simulations, the model reveals that social influence on individuals' decisions can substantially affect outcomes.

**Stephanie Camarena***Doctor of Philosophy*

Dr Camarena explores design with artificial intelligence for the sustainable and ethical transition of food systems. The research finds that designers can use AI to support and scale up sustainable outcomes in food systems by drawing on the ethical and practice frameworks that underpin the field of design for sustainability.

**Srinivas Chakravarty***Doctor of Philosophy*

Dr Chakravarty explored the mitigation of detrimental impacts of outliers, using Machine Learning techniques. The research developed a family of algorithms using Fuzzy Regression Functions to predict values of dependent features. It is applied to the generation of maps of wind speed potential to assess the feasibility of wind farms.

**Xian Yang Chan***Doctor of Philosophy*

Dr Chan investigated the effect of growth factors on melanoma intracellular signalling pathways. The growth factors activated different responses with respect to cell survival, proliferation and migration. The findings suggest that the PI3K pathway is crucial for overcoming acquired resistance in some melanomas and is a potential therapeutic target.

**Chiu Chun Chan***Doctor of Philosophy*

Dr Chan investigated the uplink performance of IoT-over-Satellite network. His analysis is achieved using both simulation and analytic approaches. He also developed an emulator to replicate practical IoT-over-Satellite systems using a self-developed MAC layer control and an in-house developed LoRa emulator. He also investigated the potential of using indoor mmWave IoT network.

**Samuel Thomas Cheeseman***Doctor of Philosophy*

Dr Cheeseman investigated how gallium-based liquid metals can be functionalised to exhibit antimicrobial properties. The research found that liquid metals had unique interactions with cells and could be exploited for antimicrobial applications. These findings provide insight into biological interactions with liquid metals and the design of future antimicrobial treatment strategies.

**Anbang Chen***Doctor of Philosophy*

Dr Chen researched an effective approach based on the bi-directional evolutionary structural optimisation (BESO) technique to control the maximum first principal stress in concrete and optimise the reinforcement layout in steel-reinforced concrete structures and combined the stress constraint with hybrid truss-continuum finite element model to control the concrete's FPS constraint.

**Zhiyi Chen***Doctor of Philosophy*

Dr Chen studied consensus control in complex network systems with microgrid applications. The research revealed the impact of switching topologies on the state dynamics of multiagent systems, and it developed a multilayered event-triggered consensus controller for clusters to regulate microgrids. These findings provide better understanding of control in complex networks.

**Xi Chen***Doctor of Philosophy*

Dr Chen studied complex events over social media with complicated user behaviour and multiple attributes. The research found that user retweeting behaviour helps in detecting complex event occurrences with location, influential hashtags can be leveraged as representation in event propagation, and multiple attributes enhance the understanding of complex events.

**Johnny Po Wen Chiu***Doctor of Philosophy*

Dr Chiu investigated the challenging speed and culture of running an architecture practice in Taipei. He discovered how to portray impermanence via innovative use of local materials, and developed a strategy of using hand gestures to reduce complex ideas into simple steps for rapid communication, meeting the demand for speed.

**Andrea Christie***Doctor of Philosophy*

Dr Christie examined how blockchain technology might assist Australian charities with rebuilding trust in their aid governance activities. The research revealed that various blockchain applications can promote or erode trust, based on charities' capacities to overcome socio-economic barriers. The findings contribute understanding on the role of blockchain in governing aid.

**Yi-Jen Chu***Doctor of Philosophy*

Dr Yi Jen Chu investigated how the assembly line manufacturing system has led to the social effects of over-production and consumption. She aims to establish new knowledge about how kinetic objects can be used as playful, engaging devices to enhance awareness of contemporary issues related to the assembly line manufacturing process.

**Wei Qin Chuah***Doctor of Philosophy*

Dr Chuah studied the data-driven AI techniques for passive visual depth-perception systems. The research revealed that AI techniques are prone to errors in inferring depth on planar regions, have short-sighted bias and are fallible to shortcut learning. The findings induce the development of robust depth-perception systems for intelligent robotic agents.

**Jonathan Charles Clarke-Hannaford***Doctor of Philosophy*

Dr Clarke-Hannaford investigated boron-based ions as electrolyte components for rechargeable lithium metal batteries. The research identified the stability and reactions of the electrolyte components with the lithium metal anode. The findings contribute to and are essential for the development and design of next-generation batteries with improved performance, safety and longevity.

**Lachlan William Raymond Coff***Doctor of Philosophy*

Dr Coff studied blood flukes in bluefin tuna. The research produced the first genome and carbohydrate composition of a marine flatworm. These findings are the first step toward the development of drugs and vaccines to control blood fluke infections in aquaculture.

**Anthony John Cooper***Doctor of Philosophy*

Dr Cooper examined the management of relationships between brands and their fans mediated through social media. Rapid change in engagement dynamics led to the reconceptualisation of brand communities as highly fluid ecosystems subject to asymmetric power structures, resulting in a transformative framework for brand governance in online settings.

**James Growdon Cooper***Doctor of Philosophy*

Dr Cooper investigated how leadership succession in Vietnamese family businesses was affecting social capital. The research identified obstacles to the transfer of social capital that impede leadership succession. The results reveal a process to social capital change and highlight inclusions to family business succession planning.

**Christine Helen Craik***Doctor of Philosophy*

Dr Craik explored screening for domestic and family abuse in Australian public hospital emergency departments. This research privileged the experiences of women victim/survivors, alongside practices of health professionals. The findings indicate a need for universal screening and outlines important factors to consider in the implementation of such a program.

**Brent Robert Crawley***Doctor of Philosophy*

Dr Crawley investigated the effects of incoherent data collection in Doppler Tomography. The research was then used to generate reconstruction algorithms for various scenarios. These include measurements containing high levels of motion and conformal target surfaces. The results enable users to generate electromagnetic scattering maps in varying measurement environments.

**Simon Peter Crosbie***Doctor of Philosophy*

Dr Simon Crosbie's research centred on an artistic response to the lived experience of childhood trauma at a Catholic institution with emphasis on dissociation and recent theories relating to boarding school syndrome. The project adopted an iterative process of visualising and critiquing the individual complexities that emerge from traumatic memory.

**Jane Grace Daly***Doctor of Philosophy*

Dr Daly developed a conceptual approach to explore the changing status of meat in everyday meals. The research revealed the practical, material, and social aspects of change in relation to meat reduction initiatives and substitute products in Australia. The findings inspire new sustainability strategies to support shifts toward plant-based diets.

**Margaret Elizabeth Dann***Doctor of Philosophy*

Dr Dann explored memory and trauma through embodied creative practice. Engaging with sensory and material art forms, the research reveals and transforms the effects of childhood trauma. The outcomes provide an original contribution to artistic, scholarly and social discourses about trauma and the presentation of trauma-informed art.

**Christine Davey***Doctor of Philosophy*

Dr Davey explored the role of a screenplay as recalibrated development tool. The research centred on screenwriting practice. One episode of a television series was written as part of the creative practice research. A feminist theoretical position underpinned the project. The outcome is a technique for innovating script development.

**Katherine Elisa Day***Doctor of Philosophy*

Dr Day explored the perspectives of publishing professionals and authors in contract negotiations. Her findings resulted in the discovery of a post negotiation space where editors were revealed to play a crucial role in author satisfaction, highlighting the need to reassess the meaning of editorial excellence in trade book publishing.

**Liam Robert James Day***Doctor of Philosophy*

Dr Day developed and experimentally validated a computational system for calculating accurate dose distributions from synchrotron microbeam radiation. The system achieves clinical grade treatment planning for cancer research on synchrotron bio-medical beamlines. The outcomes facilitate veterinary trials and progress the field towards human application of this revolutionary cancer therapy.

**Gusthinnadura Oshadie De Silva***Doctor of Philosophy*

Dr de Silva investigated the influence of the impurity phases, microenvironment, and sub-band energy of 2-dimensional electrocatalysts on their hydrogen producing ability. The research revealed the key determinants of oxygen evolution reaction. This knowledge was used to rationally design important catalysts. The outcomes will advance hydrogen as a sustainable energy source.

**Elizabeth Anne Dearn***Doctor of Philosophy*

Dr Dearn researched choice under the Australian National Disability Insurance Scheme, focusing on people with psychosocial disabilities living in supported residential services (SRS). Adopting Bourdieu as an analytic frame, the study found participants could not achieve their pervasive choices as a result of institutionalisation, NDIS marketisation and other structural barriers.

**Rebecca Zanelle Delange***Doctor of Philosophy*

Dr Rebecca Delange explored two- and three-dimensional art as enquiry into topologies of everyday display, visibility and materiality. Fieldwork, studio artworks, and installation practice restructured psycho-geographies within existing urbanscapes and exhibition sites. Outcomes suggest gleaning and material assemblage processes produce opportunities for new understanding of the experience of space.

**Antimony Grace Deor***Doctor of Philosophy*

Dr Deor investigated the ways in which nonplayer characters in computer games participate in affective networks of relations. Spinoza's affect theory and Plumwood's ecofeminist philosophy contribute to this thesis, which also looks at how queer and indie games are creating new kinds of relationships between humans and NPCs.

**Dian Retno Sari Dewi***Doctor of Philosophy*

Dr Dewi developed a model for investigating the relationship between supply chain capabilities and the sustainability performance of product-service systems. She found seven supply chain capabilities affect sustainability performance, makes theoretical contributions of paramount importance and delivers implications essential for the Indonesian motorcycle practitioners and policy makers.

**Sudip Dhakal***Doctor of Philosophy*

Dr Dhakal investigated the ways to overcome reduced proteostasis in Alzheimer's disease (AD) using yeast models. The research identified several compounds and combination of compounds that can modify the disease progression. The findings reinforce that yeast models provide excellent platform for screening compounds that can act against proteinopathy observed in AD.

**Vittoria Teresa Di Stefano***Doctor of Philosophy*

Dr Di Stefano explored sculpture practice as an enquiry into, and critical engagement with, liminal processes and gendered material domains. The production of artworks and their installation manifested reconfigured threshold experiences within existing sites and exhibition spaces. The outcomes suggest disruptive sculpture practices produce opportunities for re-inscription of the experience of material culture.

**Aleksandar Dobric***Doctor of Philosophy*

Dr Dobric investigated the mechanisms underlying cognitive dysfunction in chronic obstructive pulmonary disease (COPD). The research revealed that chronic cigarette smoking is associated with neuroinflammation, a change in synaptogenesis within the hippocampus and memory impairments. These findings will contribute to novel strategies to treat cognitive dysfunction in COPD.

**Lin Dong***Doctor of Philosophy*

Dr Dong investigated Chinese herbs for mild cognitive impairment. A qualitative study was conducted and the results of this study were used to inform the design of a protocol for a clinical trial of Chinese herbs for MCI and addressed challenges in carrying out a clinical trial for elderly people.

**Dung Dong Thi***Doctor of Philosophy*

Dr Dong investigated the binary mixture of contaminants on aquatic organisms. The findings highlight the importance of considering gender and historical exposure to contaminants, and long-term exposure to mixtures of contaminants with different physicochemical properties, like the binary mixture of Microplastics and Copper, to ensure effective ecological risk assessments.

**Russell Ian Edwards***Doctor of Philosophy*

Dr Edwards examined representations of Japan and the Japanese in South Korean cinema between 2014–2017. The thesis identified a distinct Rising Sun film cycle that paralleled the conservative administration of President Park Geun-hye. The findings indicate that such cyclical representations of Japan are complexly influenced by industry, government and geopolitics.

**Jonathan Rodrigo Erlich***Doctor of Philosophy*

Dr Erlich explored the relationship between inflammatory, metabolic and pro-oxidant pathways during respiratory viruses. Key discoveries included using an anticancer drug as a therapeutics, the role metabolism in the inflammatory response, sex-dependent differences in immunity, due to influenza infections. This research expanded our understanding of host responses against viral disease.

**Roberta Esbitt***Doctor of Philosophy*

Dr Esbitt investigated media entry into housing finance, offering mortgages through Australia's predominant digital property platform. While revealing homebuyer/borrowers to be self-protective online, the research exposed persuasive technologies and identified evolving lending and data practices with socio-economic risks. The findings advance interdisciplinary understanding of digital lending necessary for consumer protection.

**Hernan David Espinosa***Doctor of Philosophy*

Dr Espinosa used reflective practice to examine how experience designers can incorporate artificial intelligence components into their designs. This work illustrates and validates how designers can use various design frameworks to consciously shape the use of these technologies in constructing meaningful experiences for their users.

**Lisa Ewenson***Doctor of Philosophy*

Dr Ewenson researched the lived experiences of youth detention in contemporary Australia. This qualitative research revealed the deeply nuanced and complex narratives of young people recently released from this carceral environment. Recognising that a policy of decarceration is critical, a radically reimagined ethos and model of youth detention is expounded.

**Hosam Zohear Faqeha***Doctor of Philosophy*

Dr Faqeha investigated coupling of solar ponds with direct contact membrane distillation process for continuous operation. The research developed in depth understanding of the system performance and a validated numerical model for system sizing. The findings provide clear direction for sustainable desalination of sea water using solar thermal energy.

**Juan Feng***Doctor of Philosophy*

Dr Feng investigated how the meanings of the national brand are constructed by various stakeholders on social media, using China as a case study. The study proposed a multi-stakeholder engagement framework, and employed a mixed methods approach that featured social network analysis, content analysis, and surveys.

**Kate Alexandra Ferguson***Doctor of Philosophy*

Dr Ferguson explored the participation of young people in designing public spaces. She took a practice-based approach in partnership with a local government, a community organisation, and young people. She developed a participatory design framework for engaging with uncertain issues and multiple stakeholders.

**Stanley Macarthur Fergusson***Doctor of Philosophy*

Dr Fergusson researched the history of Textile Manufacture in Australia from 1788 until 2020. The research found that textile manufacturing contributed significantly to the Australian economy, until sent into decline by the withdrawal of Government support. The reduction in textile manufacturing deprived Australia of self-sufficiency in many products.

**Kurukulasooriya Sarah Divya Malhari Fernando***Doctor of Philosophy*

Dr Fernando investigated the use of rice husk ash as a sustainable source material for blended low calcium fly ash-based alkali activated binders. The findings enhance the understanding of the reaction mechanism of blended fly ash-rice husk ash alkali activated binders.

**Salvatore Ferraro***Doctor of Philosophy*

Dr Ferraro's analysis of Australian founder-led companies shows that poor performance does not contribute to voluntary succession decisions and that continued founder involvement in the CEO role enhances firm performance. These findings contribute to our understanding of entrepreneurial exits and the causal relationship between ownership structure and firm performance.

**Simon John Finn***Doctor of Philosophy*

Dr Finn's doctoral research is directed towards a propositional, ecologically driven sculpture in the sea, titled Ocean Observatory. The focus is designs for the development and construction of a large-scale marine artwork destined for a specific site. It was developed through ocean fieldwork and a heuristic architectural design processes.

**Kate Alexandra Firipis***Doctor of Philosophy*

Dr Firipis investigated combinatorial materials for biomanufacturing of living constructs. She developed a hybrid toolkit system that presents a unique modular approach for the design of tissue-specific bioinks, and demonstrated biofabrication of living muscle, neural and dermal cell scaffolds.

**Graham Patrick Ford***Doctor of Philosophy*

Dr Ford has conducted a reflection on the work of his practice, Graham Ford Architects. The research has uncovered how he has worked in different roles to design architectural projects. These roles include working in modes he has named as an 'interpreter', 'storyteller', 'design advocate', 'covert architect' and 'troubleshooter'.

**Sherouk Fouda***Doctor of Philosophy*

Dr Fouda investigated the effect of smoking and high fat diet on fatty liver development and progression. The research revealed that oxidative stress and lipotoxicity play a major role in disease progression. This thesis has made a significant contribution to the pathophysiology of disease progression of non-alcoholic fatty liver disease.

**Jasmine Erica Francis***Doctor of Philosophy*

Dr Francis investigated the use of adjuvanted solid lipid nanoparticles for DNA vaccine delivery against *Helicobacter pylori*. The results revealed that SLN are a safe and effective DNA vaccine delivery system that improves vaccine efficacy. These findings shed light on the role of lipid nanoparticles in DNA vaccine delivery.

**Donna Gallagher***Doctor of Philosophy*

Dr Gallagher explored how experience consumption goals (ECG) shape extended self. These are personally transformational experiences which transcend typical levels of meaning. This study reveals the temporality of consumption practices associated with experience consumption goals and how these practices shape the relationships between consumers and their possessions.

**Nan Gao***Doctor of Philosophy*

Dr Gao explores the ways of profiling human behaviours using sensing technologies in the real world. The research utilises various types of sensory data to predict human behaviours and discover hidden patterns. The findings enable better ways to understand emotion, engagement, personalities, and comfort from heterogeneous sensors and wearables.

**Divya Garg***Doctor of Philosophy*

Dr Garg studied fandom and disability through Marvel superhero media fandom, focusing on the experiences of non-white fans and fans with disabilities. The research identified the structural limitations of media fan communities and platforms, mirroring global inequities. The findings contribute to the decolonisation of fan and disability scholarship.

**Damian Gascoigne***Doctor of Philosophy*

Dr Gascoigne explored how gestural movement in drawing relates to constructed movement in animation. The practice-led research engaged Buddhist ideas of non-attachment to challenge production norms of control, value, and ownership. Focusing on materiality and the moving body, creative outcomes contribute new practice methodologies for drawn animation.

**Leon Gettler***Doctor of Philosophy*

Dr Gettler investigated how news organisations can innovate to create partnerships with their communities. He researched them doing this through digital first, artificial intelligence and virtual reality, audience centred publishing, expanded social media and alternative revenue streams. His findings demonstrate news services should adopt these technologies and strategies.

**Mehran Ghasemlou***Doctor of Philosophy*

Dr Ghasemlou investigated a simple and efficient method to engineer a specifically tailored surface with rough micro-topography that mimics the surface of the lotus leaf causing liquids to bounce off. He also carried out the first studies on the interactions of these plastics with natural soil environments determining their biodegradability.

**Courtney Paige Gilchrist***Doctor of Philosophy*

Dr Gilchrist examined how MRI brain features relate to psychopathology in children born very preterm. The research revealed that relations between brain features and psychopathology change across development and are stronger in early childhood. These findings enhance our understanding of the neural basis of psychopathology in the very preterm population.

**Richard John Glover***Doctor of Philosophy*

Dr Glover's practice-led research project examined Australian architecture and the built environment through photographic exploration. The photographs represent an analysis of Australian culture and a form of identification and classification regarding debates on our impact on this land, and our future national identity.

**Ranadip Goswami***Doctor of Philosophy*

Dr Goswami investigated purposefully functionalised transition metal metal-organic frameworks (MOFs) for multifarious pollutant detection-capture-detoxification. In addition, he developed in-situ grown MOF-based composites to examine analyte-triggered rapid, observable changes that are advantageous for real-world applications. At the interface of judicious functionalisation of mixed-linker MOFs, he also demonstrated DFT guided structure-property synergies.

**Tina Grandinetti***Doctor of Philosophy*

Dr Grandinetti interrogated housing precarity and settler colonial property in Hawai'i. The research employed housing justice methodologies to explore how Kanaka Maoli and settlers nurture non-hegemonic relations of belonging that resist dispossession. Taking seriously Indigenous ontologies, this research contributes to scholarship theorising property beyond the logics of exclusion and dispossession.

**Chiara Adriana Grassia***Doctor of Philosophy*

Dr Grassia studied how the design and operation of safe spaces can be understood as a form of praxis, as well as sites of world-building, care, and imagining the future. These findings enhance our understanding of the potentials of youth arts programs to support wellbeing and engagement in the arts.

**Sharon Greenfield***Doctor of Philosophy*

Dr Greenfield explored how young people in the United States used digital media as they go through bereavement. The research focused on rituals, idioms of practice, and grief negotiations. Ethnography was conducted, including interviews and participant observation. The findings indicate that young people negotiate grief online for control and agency.

**Emily Alison Gregg***Doctor of Philosophy*

Dr Gregg investigated how a strategic communication approach can be applied to biodiversity conservation. She explored ethical considerations, barriers to engagement, and the effect of different message frames on public perceptions and support for species. Her findings demonstrate the importance of strategy in planning and designing effective messaging for biodiversity.

**Marco Antonio Gutierrez Gonzalez***Doctor of Philosophy*

Dr Gutierrez Gonzalez investigated how biodiversity and ecosystem services have been incorporated into strategic environmental assessment in a range of contexts. The research reveals that critical improvements are needed to ensure strategic environmental assessments address biodiversity and ecosystem services effectively and offers insights into the enhancements that could be implemented.

**Steven Hainsworth***Doctor of Philosophy*

Dr Hainsworth investigated the fungi causing toenail disease in Australia. He showed that two main fungi were responsible and discovered a new species of fungus. He demonstrated that some fungi were resistant to the main drug used by clinicians and developed a method of rapid screening for resistance.

**Sajal Halder***Doctor of Philosophy*

Dr Halder studied itinerary recommendations to select the personalised appropriate POIs and schedule these POIs to construct itineraries considering numerous real-life constraints. This research outcomes have two-sided satisfactions where users aim to get maximum satisfaction and providers aim to get sufficient users to run their services.

**Michael Handwerker***Doctor of Philosophy*

Dr Handwerker investigated the effects of a heat and pressure treatment on the mechanical properties of additively manufactured continuous fibre reinforced polyamide 6. For the postprocessed material he developed a micro mechanical failure model and verified the applicability of Puck's failure criterion for combined shear and tensile stresses.

**Farjana Haque***Doctor of Philosophy*

Dr Haque investigated molybdenum oxides in their two-dimensional (2D) ultra-thin forms. The research discovered that the synthesized nanomaterials could be implemented in various electrochemical, photochemical and cytotoxic applications. The outcomes contribute to the exploration of large-scale synthesis of doped 2D molybdenum oxides for developing practical high-performance chemical and biological applications.

**Jess Hardley***Doctor of Philosophy*

Dr Hardley explored embodied experiences of mobile media in urban space and proposed ways to theorise how smartphones impact everyday perceptions of safety. The research combined qualitative and phenomenological methods and focused on apps and safety, gendered risk in the urban night, and modified mobile media use during COVID-19.

**Christopher James Harrison***Doctor of Philosophy*

Dr Harrison studied the sensing characteristics of surface acoustic wave devices in the joint time-frequency domain. The research resulted in a novel method to extract and analyse useful metrics that provide insight into the underlying mechanisms that drive device response, ultimately enabling simultaneous quantification of multiple gases within a mixture.

**Brendan Harwood***Doctor of Philosophy*

Dr Harwood investigated the nature of light and its use in the creation of volumetric light sculptures. Examining three key apparatuses, as well as the design of image and space, he articulates multiple points of entry into this practice of design.

**He Yi Han***Doctor of Philosophy*

Dr He systematically evaluated the current state of evidence and clinical application of acupuncture for cancer pain. Her research revealed the benefit of acupuncture in alleviating cancer pain and developed a semi-standard protocol of acupuncture as an adjunctive intervention for patients with moderate or severe cancer pain.

**Christine Eveline Healey***Doctor of Philosophy*

Dr Healey researched the practices and pedagogies of educators working at two art museums in Australia and one in the United States. Framed by the perspective of a museum educator herself, findings enhance our understandings of visitor and learner engagement and advocate for advancing art education practices within Australian museums.

**Mojtaba Hedayati Marzbali***Doctor of Philosophy*

Dr Hedayati Marzbali investigated hydrothermal treatment to convert wet paunch waste into value-added products including porous material and bio-oil. The research further suggested blending paunch waste with biosolids and producing magnetic material to improve the commercial viability of the process. The findings enhance our understanding of hydrothermal treatment technology.

**Cecilia Heffer***Doctor of Philosophy*

Dr Heffer explored new pathways and aesthetic opportunities for contemporary lace. The introduction of movement to a static textile created an embodied haptic experience of the materiality and dimensionality of lace. This discovery presents significant implications for contemporary textile practice as it transforms the way we understand, experience, and learn from making.

**Cheryl Heller***Doctor of Philosophy*

Dr Heller investigated hidden ideologies and power dynamics within language used to describe desired futures of human equity in the US. Research included writing a book, facilitating diverse authors in interpretation and iterative writing. Findings indicate that written text is an underutilised and potentially valuable tool for improving social equity.

**Jason Alexander Henry***Doctor of Philosophy*

Dr Henry investigated high-throughput chemobehavioral phenotypic screening techniques in drug discovery and neurotoxicology. The research produced modular, innovative neuro-behavioral analysis systems; for non-invasive assessment of neuro-behavioral endpoints in small aquatic model organisms. The outcomes improve fundamental analytical techniques and enable discoveries in behavioral neurotoxicology.

**Charith Lakpriya Herath Herath Mudiyansele***Doctor of Philosophy*

Dr Herath studied the performance of two high volume fly ash concretes up to a very high cement replacement of 80% modified using nano silica. The research revealed a promising overall performance of these nano silica modified concretes over the long term. This knowledge would significantly contribute towards sustainable construction.

**David Gibson Hill***Doctor of Philosophy*

Dr Hill investigated robotic bone tumour surgery; a procedure whereby a robot removes cancerous bone in one piece. He proposed a method of automatically preparing surgical plans which preserve healthy tissue, and novel tools for remodelling bone. His work saves surgeons time and improves patient's post-operative quality of life.

**Thi Hong Anh Hoang***Doctor of Philosophy*

Dr Hoang developed cost-effective bioremediation for improving total nitrogen and chemical oxygen demand removal in saline fish processing wastewaters based on the application of halophilic bacteria. The research identified that *Marinobacter hydrocarbonclasticus* successfully removed pollutants and dominated the bacterial community; suggested a potential commercial option for bioaugmentation of aquaculture wastewater.

**Stephanie Elizabeth Hogg***Doctor of Philosophy*

Dr Hogg studied statistical methods for modelling the joint distributions of multiple species in ecology. The research proposed different models to account for biotic interactions, spatial correlations and habit with consideration of imperfect detection and reporting bias. The models serve as powerful tools to improve decision making in conservation management.

**Ayaz Ahmed Hoshu***Doctor of Philosophy*

Dr Ayaz has studied the advanced control strategies for energy efficient heterogeneous multirotor unmanned aerial system. The research work provides experimentally validated stable and robust flight control system for an unconventional and complex drone configuration, which provides combined aerodynamical characteristics of both helicopter and quadcopter in a single drone design.

**Yiwei Hu***Doctor of Philosophy*

Dr Hu investigated the relationship between the FDM process-related microstructure and the lower-than-expected mechanical properties of 3D printed continuous fibre/polymer composites. The outcome reveals the opportunities for FDM process modification to reduce the fibre damage and improve mechanical properties of the 3D printed continuous fibre composites.

**Roxanne Caroline Hubesch***Doctor of Philosophy*

Dr Hubesch studied the impact binders have, when added to zeolites and used for the catalytic cracking of endothermic fuels. The research showed that the addition of aluminophosphate as a binder helps to stabilise the catalytic activity and produces valuable secondary fuels for efficient combustion, while limiting carbon deposition.

**Amanpreet Kaur Hundal***Doctor of Philosophy*

Dr Hundal investigated the design, synthesis and characterisation of organic materials for organic photovoltaic solar cells. This led to improved solar cells than those that were previously reported, and is a contribution to the improvement of future renewable energy technologies.

**Trong Luan Huynh***Doctor of Philosophy*

Dr Huynh investigated teacher leadership across four schools in Vietnam. It documented how teacher leadership is implicit in education policies, and how it is understood and practised. It proposed a localised definition and a model of teacher leadership development that can be integrated within policies and practices for school improvement.

**Huynh Nguyen Vu Lam***Doctor of Philosophy*

Dr Vu-Lam studied the adaptive capacity of rice farmers in the Mekong Delta of Vietnam. The study uses a holistic approach for the investigation in the context of an emerging economy. The application of mixed disciplines is important to enhance the understanding of the adaptive capacity of farmers.

**Nur Insani***Doctor of Philosophy*

Dr Insani developed novel optimisation models for evacuations and relief distributions at the early stage of a flood. The research produced effective resource allocation and routing plans. These findings enhance the current decision tools to support the disaster management system at the operational level.

**Muhammad Aakif Ishaq***Doctor of Philosophy*

Dr Ishaq studied the correlation between various bitumen and asphalt mixes tests at various testing conditions. The study provides significant information on the most effective testing parameters of bitumen and asphalt that are helpful in selecting durable asphalt pavement materials, also limiting the use of more expensive and time-consuming experimental set-ups.

**Mark David Jacques***Doctor of Philosophy*

Dr Jacques explored the design actions of his work in public space. The research revealed a method for designers to challenge the tropes of their discipline's engagement with site. The findings provide tactics and techniques to transform the invitation to work into a speculative space of the designers own making.

**Akshay Dayanand Jadhav***Doctor of Philosophy*

Dr Jadhav investigated the relationships between supply chain sustainability practices and financial performances based on the GRI reports of the OECD manufacturing firms. The analysis led to the identification of unique relationships which have significant implications for the manufacturing firms in achieving their sustainability goals and financial performances.

**Afshin Jafari***Doctor of Philosophy*

Dr Jafari developed a novel open-workflow for a city-scale transport simulation model for cycling in Greater Melbourne and used to it simulate strategic interventions identified by policy-makers. His findings highlighted safe and connected infrastructure is critical to increasing cycling and traffic signal optimisation interventions can decrease cycling travel times.

**Jamal***Doctor of Philosophy*

Dr Jamal worked on the development of rubberised binder's specifications for Australian roads. The research linked the rubberised binder based on its modification level to the traffic load on roads. The findings of this research will promote the use of waste tyres in paving applications that will reduce the environmental pollution caused by waste tyres and road maintenance cost.

**Yashar Jamei***Doctor of Philosophy*

Dr Jamei investigated the spatial patterns of vegetation and the urban thermal environment association. Indeed, air and surface temperature associations are significant during the night and early afternoon. Furthermore, planting complex shapes of vegetation (shrubs mainly) was more beneficial in cooling the air temperature and early afternoon surface temperature.

**Alexandra Louise Johnston***Doctor of Philosophy*

Dr Johnston explored peer review of teaching in Australian higher education. The research focused on interviews with academics about their scholarly teaching experience. Sociocultural theory supported the identification of interconnected factors at the organisational, program, and individual levels. Implications are suggested for the effective implementation of the proposed theory.

**Alistair David Jones***Doctor of Philosophy*

Dr Jones investigated the design and additive manufacturing of cellular solids based on triply periodic minimal surfaces. This included modelling manufacturing defects, forming guidelines to enable optimal design and working with automotive industry partners to translate the research findings through applied case studies.

**Ilya Binti Joohari***Doctor of Philosophy*

Dr Joohari investigated the development of hybrid polymer-modified bitumen for road pavement applications. The research revealed that using a combination of elastic and rigid polymers improves the performance of neat bitumen. These findings enhance our understanding of modified bitumen behaviour for the asphalt pavement.

**Anumoni Joshi***Doctor of Philosophy*

Dr Joshi explored post-study work rights policies in Australia, Germany, and Canada, with focus on their long-term sustainability within higher education context. The findings indicate that these policies are meeting their stated policy objectives, which include attracting more students, internationalisation of higher education, addressing labour shortages, and retaining international graduates.

**Sumaiya Kabir***Doctor of Philosophy*

Dr Kabir explored the optical and electrical properties of phase change oxide thin-films for developing sensors and devices for optoelectronic and electronic applications. She demonstrated prototypes light sensors, ultra-fast switching devices, and smart window coatings. The findings contribute to improving integration density, speed, and energy-efficiency in future electronics.

**Ammar Mansoor Kamoona***Doctor of Philosophy*

Dr Kammona investigated the potential use of Artificial Intelligence for smart surveillance applications, focusing on anomaly detection in images and videos. The research found that using random finite set theory for anomaly detection using appropriate features shows excellent performance. These findings enhance our understanding of RFS-based visual anomaly detection.

**Gabriella Karakas***Doctor of Philosophy*

Dr Karakas explored the pathways and barriers to mental health service utilisation by Croatia- and Bosnia-born migrants in Melbourne. This led to the identification of the critical factors that impact help-seeking and wellbeing outcomes. Specific policy and practice initiatives are suggested for the effective and appropriate servicing of these cohorts.

**Akib Karim***Doctor of Philosophy*

Dr Karim investigated the photoluminescence of defects in bulk crystal and clusters. The research resulted in a novel recipe to predict photoluminescence from ab-initio quantum chemistry methods and identified bright intrinsic photoluminescence of positively charged NV in diamond. The findings contribute to the understanding, prediction, and classification of defect emission.

**Holger Kehne***Doctor of Philosophy*

Dr Kehne investigated architectural form dialectically to discover and deploy a range of cognitive registers that extend the experience of architecture from functional, normative use towards affective encounters. This contributes to an understanding of architecture as systemic practice, mediating across current taxonomies and styles.

**Katherine Ann Kennedy***Doctor of Philosophy*

Dr Kennedy questioned the premise of a 'standard size' body used within fashion and apparel industries. This led to the development of a body-neutral methodological framework to support more inclusive, dynamic, ethical, non-discriminatory dress and clothing practices. The findings provide a system of methods for working with diverse body types.

**Eric Keys***Doctor of Philosophy*

Dr Keys investigated the detailed planning of the Melbourne Metro Tunnel megaproject. The research reveals how the public interest can co-exist with the delivery of major infrastructure by the private sector. The findings advance our understanding of the mechanisms governing the planning of infrastructure delivered through public-private partnerships.

**Behrooz Khademi***Doctor of Philosophy*

Dr Khademi developed a unique predictive methodological roadmap for systematically identifying opportunities in technology-driven business ecosystems. This roadmap exploits substantial data sets originating from scientific publications, patents, and pertinent outputs. This thesis contributes to our understanding of the key drivers underpinning strategic planning and policy promulgation associated with such systems.

**Muhammad Waqas Khan***Doctor of Philosophy*

Dr Khan investigated various metal-organic frameworks (MOFs)-based materials and tuned their properties using partial replacement of metals in MOFs and developing MOF composites for toxic gas sensing at room temperature. This will demonstrate the strong potential of the carefully engineered MOFs-based materials for power-saving and high-performance gas sensing devices.

**Sher Rahmat Khan***Doctor of Philosophy*

The intergenerational traumas of colonialism, neo-colonialism, globalisation, and forms of extremism continue to pose significant challenges for post-colonial Pakistan. Dr Khan's research examined the cultural politics of education and curriculum, and the opportunities that education, informed by the UN SDGs, provides in promoting inclusion and pluralism in meeting these challenges.

**Pooja Khatri***Doctor of Philosophy*

Dr Khatri researched a novel design of a linear generator for ocean wave energy conversion. The research revealed that more output power can be generated with the change in the shape of the generator through design optimisation. These findings enhance our understanding of the generator for ocean wave energy conversion.

**Muhammad Faisal Kiani***Doctor of Philosophy*

Dr Kiani studied the effect of extrusion on the mechanical, corrosion and biocompatibility properties of novel magnesium-zirconium-strontium-rare earth alloys. The research demonstrated that significant improvement in the properties were achieved via extrusion due to enhanced microstructural homogeneity, evolution of rare-earth texture, and formation of rare-earth oxides in the surface.

**Jaewon Kim***Doctor of Philosophy*

Dr Kim studied the fabrication of electronic-grade metal oxides using ultrasonic spray pyrolysis. The research produced novel syntheses for both n-type and p-type transparent conductive oxide films which achieved outstanding optical and electrical properties. These results enhance the development of high-quality oxide coatings from liquid precursors for optoelectronic devices.

**Umadevi Kizhakke Purakkel***Doctor of Philosophy*

Dr Kizhakke Purakkel synthesised novel compounds based on thiazolotriazole and quinoline heterocycles and evaluated them for biological activity. The study resulted in the identification of thiazolotriazoles and quinolines as antimicrobial and antitubercular leads, respectively. Further structural exploration of identified lead molecules is suggested to enhance potency. The Raman spectroscopic study conducted establishes a library of spectral bands for thiazolotriazole, which can guide future experiments to be conducted on cells, to investigate the mode of drug action.

**Alexandra Louise Kleeman***Doctor of Philosophy*

Dr Kleeman explored communal areas and residents' social outcomes in Australian apartment buildings. Analysis of policy, audit and survey data identified that residents' neighbouring and loneliness were impacted by communal area design, and residents' perceptions and use. These findings have policy and design implications for creating healthy high-density communities.

**Nico Florian Klenner***Doctor of Philosophy*

Dr Klenner's dissertation sheds light on the nexus of design and entrepreneurship. His research explored designer-founders' practices, identities, and learning. The three studies featured in the dissertation contribute to the literature by providing rigorous empirical research, robust theorising, and practically relevant insights into the role of designers in entrepreneurship.

**Paige Klimentou***Doctor of Philosophy*

Dr Klimentou investigated the connections between feminism, tattoos, and hardcore music. Qualitative research revealed how feminism influences decisions to get, or remove, tattoos dedicated to hardcore bands. The findings show how feminism guides fans' tattoo decisions, and this allows for gendered resistance in hardcore scenes and new forms of archiving.

**Christopher Knapp***Doctor of Philosophy*

Dr Knapp investigated the impact of digital fabrication tools upon the nature of architectural practice. This research examined project case studies to extract a transferable methodology and approach, situated within a community of practice. The proposition of this research outcome challenges the disciplinary boundaries and expectations of architecture and construction.

**Ravi Koirala***Doctor of Philosophy*

Dr Koirala studied the single species two-phase flow inside an eductor, for active vapor transfer and condensation. The outcome of the research is an eductor-based membrane desalination method for efficient use of low-grade thermal energy from renewable or waste energy sources.

**Sangita Kumari***Doctor of Philosophy*

Dr Kumari investigated development of two-dimensional layered nanomaterials for tribological applications. Her research revealed the progress in the layered nanomaterials-based additives as energy efficient additives for various lubricants. The findings contribute to improve working efficiency and life-time of machinery tools by reducing friction and wear.

**Preeti Kumhari***Doctor of Philosophy*

Dr Kumhari developed continuum approach of expansive soil in Abaqus to predict the site specific surface movement and investigated the rationality of the numerical predictions by comparing the finite element outputs with the AS2870: 2011. This research predicted soil suction changes and ground movement at site based on a continuum approach.

**Susan Margaret Lachal***Doctor of Philosophy*

Dr Lachal examines how socially engaged art practice can utilise posthuman theory to develop attentiveness to the entangled relations between all things. Focusing on environmental justice and human equity, the research comprises projects across Melbourne and Cambodia that contribute new creative and conceptual methodologies for social practice and critical posthumanities.

**Lai Kwong Kei***Doctor of Philosophy*

Dr Lai performed multi-physics simulations to investigate the performance of Proton Exchange Membrane Fuel Cells (PEMFC) in both small- and large-scales. His research revealed that relative humidity played an important role in the scaling-up process. These findings fill the knowledge gap in understanding the impact of scaling up the PEMFC.

**Wai Man Terry Lam***Doctor of Philosophy*

Dr Lam explored the transformation of his practice within Hong Kong action cinema, investigating how a specific socio-cultural environment may create a unique genre. He introduces the 'action-narrative' as a fundamental characteristic of Hong Kong action movie production, along with other conventional formative constraints of the production process.

**James Langdon***Doctor of Philosophy*

Dr Langdon investigated the \*isomorph\* as a metaphor for communication design decisions that make absurdly specific relations with content. The research revealed how practices and reasoning appropriate for communication design in a contemporary art context must be renegotiated in scientific contexts, with their differently construed notions of fidelity and credibility.

**Jonas Lausch***Doctor of Philosophy*

Dr Lausch developed novel techniques to accurately and consistently characterise the crush performance of composite flat plates and profiles. The research revealed the correlation between test setups and specimen geometries and the resulting properties, providing empirical relationships between them. These findings provide substantial cost and time savings in component development.

**Haerold Dean Zapata Layaoen***Doctor of Philosophy*

Dr Layaoen investigated the greening of Philippine transport and logistics companies (TLCs). Cross-sectional research found that TLCs abilities and institutional dynamics develop their environmental performance improving their economic and social performances. A structural model of TLCs antecedents and outcomes of environmental performance was developed using Institutional and Resource-based view theories.

**Hanna Moges Lemma***Doctor of Philosophy*

Dr Lemma examined how migrant women navigate gender and other power relations by focusing on the experiences of Ethiopian women in Melbourne, Australia. The study challenges prevailing deficit-oriented views of migrant women and reveals that these women exert different forms of agency while negotiating gender identities as immigrant black women.

**Erik Gerard Lheureux***Doctor of Philosophy*

Dr Lheureux researched his architectural practice via the climate of urban equatorial Singapore. The research focused on the conceptual, linguistic, and physical materials of climate as a primary protagonist through case studies and precedents. The findings construct a design value system where hot air is positive material for architecture.

**Wenhua Ling***Doctor of Philosophy*

Dr Ling investigated smart grid pattern recognition approaches. Her research identified new methods and approaches for identifying solar power systems from electrical data. Her findings advance the field of smart electricity grid data analytics and address current problems faced by industry.

**Liu Chengyang***Doctor of Philosophy*

Dr Liu investigated the virtual power plant (VPP)'s impacts on distributed renewable resources management and urban sustainability in an urban environment. The findings enhance our understanding of the opportunities and challenges to applying VPP for carbon emission reduction, electricity cost reduction, and economic benefits among diverse urban communities.

**Xin Liu***Doctor of Philosophy*

Dr Liu developed novel PM-based and DEM-based numerical models for unsaturated soils. The research revealed some of the key features of the micro and macroscopic hydromechanical behaviour of unsaturated soils, and explored the mechanism behind these behaviours. These findings enhance our understanding of the hydromechanical behaviour of unsaturated soils.

**Zhenwei Liu***Doctor of Philosophy*

Dr Liu developed a novel speed amplified wave energy converter to harvest the electrical energy from wave kinetic energy. The research found that utilising the resonance and optimised novel mechanism will increase the output power and reduce the cogging force. The findings contribute to improve the conversion efficiency.

**Xiaoning Liu***Doctor of Philosophy*

Dr Liu explored data privacy challenges of data mining and machine learning. The research produced novel practical secure-computation solutions and systems for versatile applications with cryptographic guarantees for end-user privacy. The outcomes contribute to the roadmap of trustworthy machine learning.

**Binsheng Liu***Doctor of Philosophy*

Dr Liu studied query generation techniques for improving ranking effectiveness of information retrieval. The research reveals the value of rewriting queries to better represent information needs, and produces novel query generation and ranking models. The outcomes improve our ability to generate and process natural language queries.

**Ryan Jamie Lobigs***Doctor of Philosophy*

Dr Bradshaw explored the meditative characteristics of recreational running. The primary aim of his research was to compare the psychological experiences and attention control processes performed during running and meditation to determine if, and to what extent, running may function as an alternative or complementary form meditation.

**Yee Man Louie***Doctor of Philosophy*

Dr Louie explored the intersection of technology and domestic violence, particularly Chinese migrant women victim-survivors' lived experience and their relationships with communication technology. The research revealed technology is a double-edged sword. The findings advance existing knowledge on technology-facilitated domestic abuse and response and have implications on social policy.

**Adrian Steven Lucas-Healey***Doctor of Philosophy*

Dr Lucas-Healey investigated the significance of Vaporwave, an internet music genre. Participants undertook a creative practice project to reflect upon their lived experience. The research contributes a methodological framework for the study of internet subcultures, and finds that Vaporwave's significance relates to experiences of personal agency.

**Emma Luke***Doctor of Philosophy*

Dr Luke explored the encoding of value in post-digital wearables and the co-emergence of the digital, material and human. In this research, animism was employed as a design strategy to develop meaningful wearables for health and wellbeing applications, resulting in a conceptual framework for the design of holistic wearable technology.

**Thi Thao Nguyen Luu***Doctor of Philosophy*

Dr Luu explored the emergence of social enterprises in Vietnam. The findings revealed the roles and practices of market intermediaries in driving the emergence of a hybrid market for social enterprises. The findings also provide a model of strategic actions for market intermediaries in driving and shaping markets.

**Debolina Debasis Majumdar***Doctor of Philosophy*

Dr Majumdar studied C. jejuni hypothetical proteins and their possible relevance to colonisation in chickens. The research identified two proteins with the potential to interact with chicken cells and consequently may facilitate colonisation. These findings enhance our understanding of C. jejuni proteins and their possible role as vaccine candidates.

**Sajida Parveen Malik***Doctor of Philosophy*

Dr Malik has investigated role of microglia in sickness response initiation and its resolution due to immune challenge and role of microglia in obesity induced neuroinflammation and in ageing related cognitive deficits.

**Anjay Manian***Doctor of Philosophy*

Dr Manian explored theoretical methods which could model energy based phenomena, and all the intricacies therein, for light harvesting applications. The research yielded results correlating well with experiment. The outcomes provide a good starting point for viable property prediction of devices, while remaining flexible to further improvement.

**Nima Manshoori***Doctor of Philosophy*

Dr Manshoori investigated the effect of U.S. shale gas on oil and gas market. The findings confirm that the U.S. shale gas boom did not affect the crude oil and natural gas long term cointegration, however it improves the natural gas supply security of the U.S. and major importing countries.

**Jonathan Marquez***Doctor of Philosophy*

Dr Marquez explored educational card game design for facilitating speaking practice of pragmatic markers of a foreign language. Research outputs included an educational card game and a design process framework. Findings emphasised designing game rules that encourage learners to practise speaking pragmatic markers in contextualised scenarios presented on cards.

**Kariza Thea Martin***Doctor of Philosophy*

Dr Martin investigated a novel way to improve the interlaminar fracture toughness of composites using additive manufacturing. The research discovered a new and highly effective toughening mechanism. These findings will be used by Boeing in the regulatory certification of resin infused composite structures of future aircraft.

**Sarah Masoumi***Doctor of Philosophy*

Dr Masoumi studied forest-fire detection using radio wave incoherent scattering from the created plasma state in burning forest. The research revealed a strong reflection of the electromagnetic radiation by plasma. This valuable finding enables us to design a radar system for reliable detection of forest-fires in real-time from far distances.

**Mercy Natalie Masta***Doctor of Philosophy*

Dr Masta explored factors that influence notions of Pacific Island masculinities. The research addresses the lack of Pacific Island men's voices in gender and masculinity research and programming. The findings indicate that a deeper understanding of men's experiences of inequality and engagement of men as 'allies' in gender-transformative work is needed.

**Caroline Anne McMillan***Doctor of Philosophy*

Dr McMillan developed novel wearable technologies for Internet of Things (IoT) networked ecosystems; Live:scape BLOOM and AURA:MATON. Critical theory and ecological ethics directed aesthetic principles. The research revealed that multisense-oriented perceptions centres design risks and potentials. The findings advance soft robotics and olfactory design for autonomous data display systems.

**Luke Benjamin McNabb***Doctor of Philosophy*

Dr McNabb studied disturbance estimation techniques for compensating closed-loop control of power-electronic and induction machine systems. The research identifies the specific constraint handling properties inherent to the estimator to improve the control performance of limited actuation systems. These findings provide a basis for high-performance constrained control with minimised design overhead.

**Fearghus Richard McSweeney***Doctor of Philosophy*

Dr McSweeney investigated the evolution of Victoria's earliest land plants. He described four new taxa and some morphologies not expected for this region. These findings greatly enhance our understanding of early plant evolution in north-eastern Gondwana during the late Silurian-early Devonian.

**Laura McVey***Doctor of Philosophy*

Dr McVey identified the perpetration of market violence against women, specifically as manifest in the online pornography market and found that this particular market encourages and coerces women to participate in and (re)produce their sexualised (self)subordination through content creation.

**Sunil Mehla***Doctor of Philosophy*

Dr Mehla developed a new lateral electrodeposition method for fabrication of gold microelectrode arrays. The morphology and plasmonic properties of microelectrode arrays can be readily fine tuned using the developed method. These findings allow fabrication of efficient and multi-functional sensors for reliable detection of important chemical and biochemical molecules.

**Lucas John Merlo***Doctor of Philosophy*

Dr Merlo developed a framework to implement innovation more effectively within Australian advanced manufacturing (AMSME) sectors. He identified significant internal-and-external factors-of-innovation for AMSMEs, of which no principal framework in Australia currently exists. This framework can be useful to effectively implement innovation to improve competitiveness of professional service providers and AMSMEs.

**Md Shahin Mia***Doctor of Philosophy*

Dr Mia studied novel biodegradable magnesium-graphene nanocomposite materials for biomedical applications. The research revealed that graphene increases the strength and the corrosion resistance of the nanocomposites in artificial body fluid and human osteoblast-like cells. The research findings enhance our understanding of graphene-reinforced magnesium matrix nanocomposites for biomedical applications.

**Katherine Jane Middleton***Doctor of Philosophy*

Dr Middleton's social work research explored the lived experiences of pregnant and parenting international students in Victoria. These women encounter serious barriers and discrimination in accessing health services, owing to their immigration status. The study aims to improve services, information and support for future international students and their babies.

**Andrew Scott Miller***Doctor of Philosophy*

Dr Miller explored the concept of material life in all things to address concerns related to environmental crises. The research communicated the interrelated complexities of material behaviours through a diverse range of projects. The emergent practice methodology and design techniques provide tools for growing ecological awareness in spatial design practice.

**Mahnaz Moeini***Doctor of Philosophy*

Dr Moeini studied trace organic chemicals attached to plastic fragments collected in Melbourne, Victoria, using a comprehensive multi-residue GC-MS spectrometric method. The research revealed pollution profile of these plastics in aqua environment. These data help to establish a future microplastic monitoring system, provide useful information for evaluating potential microplastic risks.

**Mohammad Mohammadi***Doctor of Philosophy*

Dr Mohammadi explored the social life of Privately Owned Public Space (POPS) in Melbourne. The research focused on the relationships between users' activities and spatial features. Users' activities were observed and mapped. The findings indicate encouraging and discouraging impacts of spatial features on POPS' activities.

**Nurudeen Ishola Mohammed***Doctor of Philosophy*

Dr Mohammed investigated pipe flow of sanitised sludge as a model material for sludge pipeline transportation. First a simulant material mimicking rheology of sludge was prepared, and laminar flow was estimated from bench-top measurement technique. Then, delay in laminar-turbulent transition was quantified and explicit correlation was suggested for turbulent flow.

**Jakeria Mohd. Rafiuddin***Doctor of Philosophy*

Dr Mohd Rafiuddin has investigated corrosion inhibition mechanisms of an organic inhibitor on AA6xxx with quantification of cohesion strength and molecular alterations. Organic corrosion inhibitor could form a complex film over AA6xxx that degrades with time due to defective film structure. These findings could be useful for future coating industry.

**Lena Ida Margaret Molnar***Doctor of Philosophy*

Dr Molnar explores how young Australians use social technology for prevention of violence against women (PVAW). This study analyses comments from an Australian digital PVAW campaign and data from focus groups with young people about PVAW material. The findings demonstrate how participants thoughtfully engage with PVAW to influence social change.

**Damien Terrence Moodie***Doctor of Philosophy*

Dr Moodie investigated the ecological impacts of Australian PFAS contaminated biosolids. The investigation was the first of its kind to detect the presence of diPAPs a PFAS precursor in Australian biosolids as well as being the first study of its kind to determine PFAS baseline levels in Victorian agricultural soils.

**Tal Mor Sinay***Doctor of Philosophy*

Dr Mor Sinay explored informal commemorative practices. The research focused on possible forms and methods of contemporary memorials through the design of memorial objects. The outcome of the research is a suggested model for informal memorial design that employs a Collaboratory design approach.

**Jane Helene Morley***Doctor of Philosophy*

Dr Morley researched the potential new materialist perspectives offer to enhance the social relevance of fashion practice and proposed Intra-active Fashion as a way of extending a fashion practitioner's sphere of influence, increasing the creative potential and inclusivity of fashion practice, and making fashion more responsive and socially relevant.

**Justin Gregory Morrissy***Doctor of Philosophy*

Dr Morrissy studied the effects of nitrogen contamination on microbial communities in a groundwater aquifer contaminated from multiple sources. The research revealed that there is a difference in the effects of nitrate and ammonia on the microbial ecosystems. These findings enhance our understanding of groundwater microbial ecosystems.

**Shaez Taya Mortimer***Doctor of Philosophy*

Dr Mortimer explored LGBTQA people's experiences of living through sexual violence. She interviewed 18 LGBTQA survivors of sexual violence, and 29 support service workers, in Victoria and South Australia. The findings provide crucial insight into LGBTQA people's experiences of healing from sexual violence and inform improvements to service delivery.

**Fraser Malcolm James Muggeridge***Doctor of Philosophy*

Dr Muggeridge examined innovation in graphic design. The research focussed on combinations of traditional mastery and deliberately unconventional techniques, described as 'knowing wrongness', through case studies and reflective practice. These findings enhance our understanding of contemporary design methods and offer an alternative approach to design practice.

**Ayman Mukhaimar***Doctor of Philosophy*

Dr Mukhaimar proposed robust deep learning frameworks for the classification and segmentation of 3D objects. The proposed frameworks successfully classify objects where measurements are noisy and contain outliers. The proposed frameworks can improve the industrial platform where classification under challenging conditions is necessary.

**Mulyadi***Doctor of Philosophy*

Dr Mulyadi studied integration of LA and DRR. The research found that institutional coordination of LA and DRR could support DRR projects in reducing exposure and thus vulnerability of the people without making tenure insecurity worse. The finding support implementation of DRR infrastructure projects, resettlement, and enforcement of spatial planning.

**Enkhtsetseg Munkhchuluun***Doctor of Philosophy*

Dr Munkhchuluun contributed towards characterising the frequency, long-term voltage and first-swing rotor angle stability issues in power systems with high-share of power electronic converter interfaced renewable energy sources. This research also developed new control strategies for distributed and renewable energy sources to improve stability of future renewable rich power grids.

**Musharavati Ephraim Munyanyi***Doctor of Philosophy*

Dr Munyanyi examined the effectiveness and allocation of sub-national foreign aid projects. The research indicates that aid improves household outcomes and donors tend to allocate aid to areas endowed with natural resources. The findings suggest several policies to enhance aid performance and allocation at the sub-national level.

**Sundaram Muthu***Doctor of Philosophy*

Dr Muthu developed a method to identify, segment and track all moving objects in complex dynamic scenes robustly using semantics. The formulated motion segmentation algorithms were successfully employed in challenging scenarios. These algorithms are efficient and can be used for designing a visual intelligence system that can enhance safety.

**Ruwan Thushara Sampath Nagahawatta***Doctor of Philosophy*

Dr Nagahawatta investigated the critical security and privacy factors that influence the adoption of cloud computing in Australian SMEs. An integrated framework was developed based on three theories, along with the systematic literature review. The findings revealed how security and privacy-related requirements significantly impact cloud computing adoption by Australian SMEs.

**Marc Daniel Nair***Doctor of Philosophy*

Dr Nair explored how a shift in worldview (specifically, a loss of evangelical faith) can impact and transform a creative writing practice. Grounded in practice-led research and expressed through a satirical liturgy and multiple selves, his research interrogates a set of creative-critical embodied experiences related to the process of un-faithing.

**Nazim Nassar***Doctor of Philosophy*

Dr Nassar developed a controlled-release drug delivery system transporting biotherapeutics orally while shielding them from gastric acidity. Furthermore, he uncovered a wide-spectrum antimicrobial activity of a novel peptide against pathogenic bacteria. The IP of this discovery was filed under a provisional patent named Formulations for delivery of bioactive agents.

**Christoph Nebl***Doctor of Philosophy*

Dr Nebl advanced mathematical models for current, energy and power predictions of lithium-ion cells including their validation on battery modules. The findings allow to increase scope of application of physical models. They enable a cost-effective feasibility study on technical requirements, particularly if project- and application-specific parameters are still insufficiently defined.

**Thai Hoang Phuong Ngo***Doctor of Philosophy*

Dr Ngo explores the impact of French colonisation on the personal and collective identity of the Vietnamese diaspora through archival modes of art making.

**Thien-Ngan Nguyen***Doctor of Philosophy*

Dr Nguyen explored novel methods for fabricating complex microfluidic structures. The research introduced a series of unconventional techniques for fabricating biologically relevant microfluidic systems, reducing the need for traditional microfabrication facilities. These findings will benefit the development of organ-on-chip platforms for modelling cardiovascular diseases and testing new drugs.

**Nguyen Anh Tuan***Doctor of Philosophy*

Dr Nguyen investigated the determinants of consumer trust in mobile payment continuance intention. The research verified a model including three important groups of factors: acceptance trust factors, cultural factors and trust types, with a R2 score of 0.842 and outperforms previous models in the existing literature.

**Huy Quoc Nguyen***Doctor of Philosophy*

Dr Nguyen investigated the thermal behaviour and performances of an innovative self-contained thermal management of metal hydride hydrogen storage using organic phase change material when it undergoes frequent charging/discharging while operating in the context of a standalone solar-hydrogen system.

**Dang Quy Nguyen***Doctor of Philosophy*

Dr Nguyen studied the vibration of vehicles in tire-road separation conditions. The research revealed a new mathematical definition for separation phenomena and resulted in discoveries of vehicle vibration behaviours. These findings are used to analyse vibration dynamics by means of applying appropriate actuators to the damper results in increasing ride comfort.

**Lan Thi Nguyen***Doctor of Philosophy*

Dr Nguyen conducted an existential analysis of Vietnamese women leaders' life-stories. This created the basis for conceptualising leadership as a process of becoming, which challenged the traditional positioning of Vietnamese women as the non-agentive Other. Her study provides an existential-hermeneutic approach for thinking about women's emancipation in the Global South.

**Lien Huong Nguyen***Doctor of Philosophy*

Dr Nguyen examined the role of extended family in family purchase decision-making in an emerging market. Adopting a multi-generational perspective, the findings identify the critical roles enacted by parents of adult children in high-involvement consumption decisions and reveal the tensions between tradition and modernity that influence family dynamics.

**Minh Truong Nguyen***Doctor of Philosophy*

Dr Nguyen studied impacts of land tenure devolution on indigenous forest dweller communities in Central Vietnam. His research concluded that there will be negative long-term impacts from land tenure devolution on indigenous culture and the local environment. His finding contributes to the land and forest management policy development of Vietnam.

**Edward Norman***Doctor of Philosophy*

Dr Norman investigated the phytochemical constituents of two Australian Customary Medicinal plants (*Haemodorum brevisepalum* and *Drosera magna*), isolating 17 new and 29 previously reported compounds. Additionally, he compiled a comprehensive database of all 393 spp. of the Customary Medicinal Flora reported from Australia (over 264 genera), visualised via networking strategies.

**Hasan Nuhanovic***Doctor of Philosophy*

Dr Nuhanovic investigated the problem of the missing persons in the aftermath of "ethnic cleansing" and genocide in Prijedor and Srebrenica, Bosnia and Herzegovina. As the survivors' struggle for truth and justice continues, closure remains a distant prospect both at the individual and community levels.

**Dian Nuraiman***Doctor of Philosophy*

Dr Nuraiman studied prioritised collaborative vehicle routing and scheduling problems (PCVRSPs) in which limited vehicles with various capabilities are deployed to deliver services to customers with synchronous visit requirements. Computational tests on realistically large benchmark instances showed that his proposed decomposition methods provide high quality solutions within operational time.

**Monica Maree O'Dwyer***Doctor of Philosophy*

Dr O'Dwyer investigated the experiences of skilled migrants working in care in Australia. She found intensified family work, undervaluing of skill, and individual agency shape the transition into frontline care and experiences at work. The research identifies pervasive gender and ethnic inequality institutionalised in Australian migration, settlement and care regimes.

**Joseph Funso Olorunyomi***Doctor of Philosophy*

Dr Olorunyomi studied metal-organic framework (MOF) composite materials for chemical detection using fluorescence techniques toward the development of MOF-based sensors. Incorporating light-controlling and light-emitting nanomaterials with MOFs enhanced the sensing performance. This research proposes a new approach for developing portable MOF-based sensors for future environmental sensing and personal diagnostic devices.

**Osezua Oseghale***Doctor of Philosophy*

Dr Oseghale investigated influenza A virus infection during pregnancy. The research revealed that influenza is not solely a lung disease but also a significant maternal cardiovascular and fetal developmental disease. These findings highlight the need for better vaccines and therapeutics to treat influenza in pregnant mothers and their baby.

**Gideon Kwame Otchere***Doctor of Philosophy*

Dr Otchere explored key drivers of gated communities in Ghana and the UK. The research focused on market demand and supply. Through interviews and surveys, the views of residents and developers were collected. The findings suggest a continuous increase in gated community demand and development, particularly in Ghana.

**Sudhakar Pabba***Doctor of Philosophy*

Dr Pabba investigated the thermodynamic and kinetic aspects of crystallisation of poor water-soluble drugs. The outcomes of the study propose a novel approach for enhancing drugs solubility. The research findings are crucial for drug development and pharmaceutical analysis. It also aids in designing a crystalliser in the pharmaceutical industry.

**Maurice Pagnin***Doctor of Philosophy*

Dr Pagnin investigated the role of transthyretin in oligodendrocyte development and re-myelination in mice. The research identified transthyretin as a regulator of oligodendrocyte maturation associated with enhanced re-myelination. This thesis made a significant contribution to neurobiology and provided valuable insight in developing therapies for demyelinating diseases such as multiple sclerosis.

**Delaram Pahlevani***Doctor of Philosophy*

Dr Pahlevani developed an optimisation framework to tackle real-life routing problems focusing on home health care planning and wildfire management applications. The computational results demonstrate the models' ability to enhance the efficiency of operational decision during fire emergencies and for the workforce planning for home care providers.

**Sri Tuntung Pandangwati***Doctor of Philosophy*

Dr Pandangwati explores vegetable farmers' lived experiences in Yogyakarta, Indonesia. The findings suggest that farmers encountered multiple interconnected social-environmental stressors, and their responses to these stressors include both short-term and long-term strategies. This research provides direction for adaptation and planning policies to be more attentive to the farmer lived experience.

**Angelica Papanicolaou***Doctor of Philosophy*

Dr Papanicolaou researched the consequences of pneumococcal lung infections in chronic respiratory diseases, including chronic obstructive pulmonary disease (COPD) and asthma. She found that key immune cell pathways were impaired in the asthmatic lung microenvironment in response to lower airway infections caused by the pneumococcus.

**Koranat Pattarakunnan***Doctor of Philosophy*

Dr Pattarakunnan investigated the design, manufacture and performance of energy storage composite materials containing lithium-ion batteries. These innovative materials can simultaneously carry structural loads as well as store and supply electrical energy, thus making them weight and energy efficient for next-generation electric vehicles.

**Michaela Patricia Pegum***Doctor of Philosophy*

Dr Pegum explored links between art making and felt experience in the natural world. She developed new electroforming processes to create hybrid materials out of metals and textiles, and produced a body of sculptural, wearable and image-based works that explore embodied relationships with the art object and the environment.

**Dejana Pejak***Doctor of Philosophy*

Dr Pejak investigated the effect of print temperature and molecular weight on the mechanical strength of the interlayer bond in Fused Filament Fabricated parts. It was found that increasing print temperature and a high proportion of short molecular weight chains effectively enhanced the fracture resistance of the printed interlayer region.

**Nelum Pematilleke***Doctor of Philosophy*

Dr Pematilleke investigated oral processing of meat, to use that knowledge in designing texture modified meat for people with dysphagia. The research revealed that meat texture has an impact on oral processing and hydrocolloids can improve the meat texture. These findings enhance the existing knowledge in dysphagia food design.

**Salpadoru Tholkamudalige Anupiya Manuja Perera***Doctor of Philosophy*

Dr Perera investigated the potential of stabilising expansive clay subgrade utilising waste glass and a VAE polymer. The findings from the research revealed that the polymer treatment of clay together with the addition of glass leads to significant improvements in both the strength as well as the stability of clay.

**Christopher Dylan Pevitt***Doctor of Philosophy*

Dr Pevitt investigated the capabilities of capturing free stream flow characteristics of speed and turbulence, through the conception of a Smart Tuft Sensor. Successful development has led to highly accurate, low cost flow measurements that will significantly contribute and broaden the capabilities of flow visualisation techniques.

**Pham Thi Ngoc Quynh***Doctor of Philosophy*

Dr Pham investigated the impacts on community from golf-based tourism in a peri-urban village, Vietnam. Thirty-one qualitative semi-structured in-depth interviews, participant observation, and field observation were utilised. An understanding of affected community experience was necessary to unfold the current issues and potential impacts from the land-use change and development project.

**Thanh Tung Pham***Doctor of Philosophy*

Dr Pham investigated the transfer of training among Australian construction workers participating in occupational health and safety (OHS) training. The research confirmed a model of transfer intention and identified factors affecting training transfer. Specific implications were suggested to promote the transfer of OHS training among Australian construction workers.

**John Pillans***Doctor of Philosophy*

Dr Pillans explored automation of engineering design work. The research revealed applicable artificial intelligence techniques have been stagnant for decades. Faster and higher accuracy models enable more thorough exploration of possible solutions, producing better designs. The findings improve automation effectiveness and efficiency in engineering design.

**Cecilia Kathleen Power***Doctor of Philosophy*

Dr Power's research investigates blood fluke infection in ranched Southern Bluefin Tuna, and includes the development of a novel diagnostic test that can be used on-site for rapid detection of blood flukes. Dr Power's research aims to improve fish health and reduce costs within the Southern Bluefin Tuna aquaculture industry.

**Geeta Pradeep***Doctor of Philosophy*

Dr Pradeep evaluated the effectiveness of embedding a pharmacist in a General Practice clinic to improve health outcomes for type 2 diabetes patients. The pharmacist intervention improved clinical outcomes by optimising patient-centered collaborative medicines management, thus substantiating the critical role of pharmacists in primary care to manage chronic diseases.

**Liang Qi***Doctor of Philosophy*

Dr Qi investigated how various factors may affect an organisation and its employees' attitudes towards advanced technology adoption in the context of innovation. His findings contribute to the development of a practical guide for the practitioners to prioritise and apply innovation in Architecture, Engineering and Construction projects.

**Kai Qin***Doctor of Philosophy*

Dr Qin studied and solved essential issues based on graph structural or sequential data. The research provides formulation and solutions for enhancing graph-based pattern matching with graph summarisation, imputation of human mobility on location-based networks, and multiple-agent traveling issues on dynamic graphs. These findings enhance our understanding of graph-based learning.

**Quach Thi Ngoc Minh***Doctor of Philosophy*

Dr Quach studied the policy and regulatory framework for transnational higher education (TNHE) in Vietnam. The research found that despite a comprehensive policy and relatively open regulatory approach, the impacts of TNHE on higher education reform have been marginal. The findings enhance our understanding of TNHE policymaking, implementation, and impacts.

**Emma Jane Rae***Doctor of Philosophy*

Dr Rae investigated workplace gender inequality in the big four accounting firms (PwC, KPMG, EY and Deloitte). Her research project proposes one possible avenue for organisational change with regard to progress on gender equality: improvement to public gender reporting.

**Md Aminur Rahman***Doctor of Philosophy*

Dr Rahman investigated on fluvial sand-sized sediments of the Brahmaputra River Basin of Bangladesh. This investigation is focus on obtaining new knowledge on the composition and characteristics of minerals sands which contribute to determining the potential of minerals sands to be a commercial source of heavy minerals.

**Md Saifur Rahman***Doctor of Philosophy*

Dr Rahman examined capital mobility to assess financial integration among ASEAN+3 economies. The empirical results revealed that capital mobility has significantly increased from the pre-agreement period to the post-agreement period, reflecting the higher degree of financial integration. It enables policymakers and market participants to adopt suggested policy implications.

**Piumie Madhushika Dilrukshi Rajapaksha Pathirannahalage***Doctor of Philosophy*

Dr Rajapaksha Pathirannahalage invented novel wastewater remediating membranes using nano-composite graphene oxide materials. These membranes were 99% effective in killing infectious waterborne pathogens and 80% in removing toxic chemicals in a wastewater system. This fundamental knowledge aims to lower the cost of wastewater processing for developing nations.

**Yamuna Rajoo***Doctor of Philosophy*

Dr Rajoo investigated the relationship between physical activity (PA), acceptance and mental health in people with Alopecia Areata (AA) to inform an evidence-based intervention. The findings informed that the PA and acceptance and commitment therapy may be beneficial in improving the mental health of people with AA.

**Kavindu Ranasinghe***Doctor of Philosophy*

Dr Ranasinghe developed novel health and mission management frameworks suited to meet integrity assurance requirements of autonomous aerospace systems. The research focused on diagnostic and prognostic tools for safety-critical systems utilising model-based and data-driven reasoning. The findings support the development of the next major evolution of system health management concepts.

**Agathe Tiana Randrianarisoa***Doctor of Philosophy*

Dr Randrianarisoa explored the economic and social impacts of Large-Scale Mining in Low- and Middle-Income countries, with a case study of Madagascar using an interdisciplinary approach and mixed methods at the national, regional and local levels. The research findings offer a diagnostic of the impacts and avenues for sustainable mining.

**Chithrangani Wasantha Menike Rathnayake***Doctor of Philosophy*

Dr Rathnayake studied land use land cover change (LULCC) and its effects on elephant habitat in Sri Lanka using Landsat time-series data. The findings show a strong correlation between LULCC and human elephant conflict, and the efficacy of Sri Lankas protected area network in countering the issue demonstrated clear weaknesses.

**Aisha Rehman***Doctor of Philosophy*

Dr Rehman explored the application of nanodiamond in the field of textiles. The investigation was conducted to fabricate and characterise nanodiamond/textile composites through various methods. The outcome affirms that nanodiamond can be applied into the fibrous system towards next-generation smart textiles.

**Benjamin Tyrrell Robinson***Doctor of Philosophy*

Dr Robinson's research sought to understand risk pricing in residential development, including an available profit and risk valuation formula. Residential development risks were identified and analysed via a quantitative, industry based, survey applied to a hypothetical development and thereafter qualitative, semi-structured interviews were conducted to better process the research outputs.

**Ruth Rossell***Doctor of Philosophy*

Dr Rossell investigated the cognitive strategies mothers used to evaluate their young children through protocol analysis with mothers and reanalysis of parental concern data. She presented a control theory model to illustrate the iterative, active and predictive qualities of maternal appraisal and the strategies mothers used to manage uncertainty.

**Angela Maree Rossitto***Doctor of Philosophy*

Dr Rossitto investigated how sculptural installations comprising fibre and light can generate perceptions of deep time. The installations emphasise how the relationship between artist and material can be understood as a collaborative process – a material negotiation. New perceptions of material agency and deep time enhance the understanding of ecological interconnections.

**Mahan Rudd***Doctor of Philosophy*

Dr Rudd researched the application of Carbon Fibre Reinforced Polymers (CFRPs) for manufacturing microwave components. In his research he investigated the CFRP high frequency modelling, electrical characteristics, and methods for improving these characteristics for radio frequency applications.

**Sadaf Saeed***Doctor of Philosophy*

Dr Saeed investigated the role of actors in transferring transport policies in developing countries by using a case study of Lahore, Pakistan. The researcher described the symbolic influence of transport technology in policy transfer and suggested policy guidelines as a prerequisite for implementing foreign transport solutions at a local level.

**Abdul Salam***Doctor of Philosophy*

Dr Salam investigated the psychological and ethical motives for organic food using the PMT and H-V theory. Using mixed methods, this study validated the integrated model that enhanced the predictability of organic food buying behaviour. This study offers several theoretical and practical implications.

**Farzaneh Salehi***Doctor of Philosophy*

Dr Farzaneh Salehi developed an integrated spatio-temporal methodology for modelling corrosion processes and assessing reliability along buried cast iron water pipe networks based on pipe and soil characteristics. The outcome assists water authorities with a tool for predicting the failure time and locations along pipe networks due to external corrosion.

**Abdul Sattar***Doctor of Philosophy*

Dr Sattar investigated and designed the control systems for the fixed wing UAVs having multiple control surfaces. He found that the multiple control surfaces offer significant improvements to the aircraft in terms of stability and control authority. The outcomes of the research assist in achieving robust flight performance and redundant control.

**Rosamund Elizabeth Scott***Doctor of Philosophy*

Dr Scott studied painting as part of interior design practice and questioned how painting is positioned as representation and communication. Through experimenting with painting in watercolour and wall paint, with and in environmental forces, a new approach to painting was developed: one of composing interior conditions.

**Chathuri Lasanthika Senarath***Doctor of Philosophy*

Dr Senarath investigated the role of governance mechanisms such as social capital and management controls on the relationship between risks and performance outcomes of public private partnerships (PPPs). The findings enhance our understanding on PPP risks management from an organisational-level perspective, leading to more efficient and effective PPP eco-system.

**Syed Danial Ali Shah***Doctor of Philosophy*

Dr Shah developed software-defined networking solutions to manage the next-generation wireless networks to provide automation, efficient network management, scalability, and cost savings over traditional networks. The research emphasised the importance of upgrading traditional networks into dynamic programmable networks for a connected and intelligent society.

**Mir Zaman Shah***Doctor of Philosophy*

Dr Mir Zaman Shah investigated the challenges and opportunities for educational leaders in Aga Khan high schools in the Chitral districts, Pakistan, in realising the promise of "inclusive and equitable quality education".

**Elham Shahhoseini***Doctor of Philosophy*

Dr Shahhoseini studied the effects of gold nanoparticles (AuNPs) on kilovoltage brachytherapy dose enhancement and their effects on cell migration. The research revealed that AuNPs can significantly enhance the dose in kilovoltage brachytherapy and prohibit cancer while promoting non-cancerous cell migration. These findings enhance radiation therapy treatment outcome.

**Amina Shahzadi***Doctor of Philosophy*

Dr Shahzadi explored language teachers' assessment practices in an English medium of instruction university in Pakistan. The mixed-method case study identified different contextual factors hindering language teachers' formative assessment in EAP writing classrooms and suggests the need for contextualised language assessment training to enhance teachers' assessment practices.

**Sheik Mohammed Ali Shajahan***Doctor of Philosophy*

Dr Shajahan investigated the use of wearable sensors for diagnosis of people with essential tremor. This work has the potential of diagnosis and monitoring of number of neuro-degenerative motor disorders. This will assist the neurologists to take more speedy and informed patient management decisions.

**Apurva Kirti Sharma***Doctor of Philosophy*

Dr Sharma investigated the reform of Australian corporations law to allow businesses to pursue an extended model of corporate purpose that advances profitability with social-political objectives. She assessed benefit corporation legislation of the United States as a possible reform model. Her findings confirm the need for corporate purpose law reform.

**Hao Shen***Doctor of Philosophy*

Dr Shen investigated the environmental contaminants in the Port Phillip Bay, Australia and their effects on the health of Mediterranean mussels using standard and innovative biomonitoring and ecotoxicological methodologies. His research contributes novel methods of assessing risk from contaminants in coastal marine environments.

**Amir Abed Al-Salam Shtayat***Doctor of Philosophy*

Dr Shtayat studied the monitoring and prediction of pavement degradation. The research focused on introducing new dynamic pavement monitoring techniques for local roads in Melbourne. Also, aimed at predicting the pavement condition performance by identifying and classifying the levels of degradation. The thesis findings enhance our understanding of pavement condition.

**Shweta***Doctor of Philosophy*

Dr Shweta studied the potential of carbon materials as electrodes for energy applications. The study revealed that readily available and eco friendly carbon based gas diffusion layers can enhance power density and efficiency of PEM fuel cells, and that nitrogen doped carbons can effectively store atomic hydrogen in a proton battery.

**Matthew Paul Sinclair***Doctor of Philosophy*

Dr Sinclair examined Australian school funding policy. The research focused on the Review of Funding for Schooling's (2011) policymaking process. Policy texts, speeches, press releases and media articles were collected and analysed. Critical policy analysis informed the design and interpretation. The findings indicate that the Australian education system's equity problem continues.

**Nasrin Sohrabi***Doctor of Philosophy*

Dr Sohrabi conducted research on the scalability and performance limitations of blockchain. The study focused on addressing these limitations for general applications. She proposed a new structure, HTNZ, and a new consensus algorithm, SAZyzz; and then combined the two components and devised a new blockchain protocol, ZyConChain, for general applications.

**Yang Song***Doctor of Philosophy*

Dr Song explored the antecedents and consequences of workplace gossip. This research found that different leadership styles can affect employees' positive and negative gossip about leaders. Gossiping behaviour also affects gossipers' job performance, supervisor liking and reward recommendation. These findings enhance our understanding of workplace gossip from gossipers' perspective.

**Mingshi Song***Doctor of Philosophy*

Dr Song researched a series of gallium (Ga) containing coatings upon the surface of Mg, which are expected to not only suppress the initial degradation kinetics but reduce the risk of implants associated infections through sustained release of antibacterial agents during the degradation process to surrounding tissues.

**Merinda Grace Staubli***Doctor of Philosophy*

Dr Staubli studied the meanings and characteristics of children's horror television broadcast in Australia between the 1990s and early 2000s. The research focused on the memories of former fans and key programs and episodes. The findings indicate that children's horror television had lasting positive impacts on participants' tastes and identities.

**Dianne Stratton-Maher***Doctor of Philosophy*

Dr Stratton-Maher explored registered nurses as they transitioned from clinical practice to a nurse academic position in higher education undergraduate nursing programs. The phenomenological study focused on the clinicians' lived experience. Findings confirmed the need for universities to facilitate an authentic onboarding process, to guide and support novice nurse academic.

**Hugh Thomas Sullivan***Doctor of Philosophy*

Dr Sullivan investigated quantum dot structures in the presence of electromagnetic fields by developing a modelling framework based on the finite element method and the Schrodinger-Poisson equations. By employing these methods, the author was able to examine these semiconductor nanostructures with a range of geometries and fields.

**Nasrin Sultana***Doctor of Philosophy*

Dr Sultana investigated, how to solve route optimisation problems efficiently based on deep neural networks, which can be generalised over multiple applications.

**Dennis John Francisco Sumaylo***Doctor of Philosophy*

Dr Sumaylo investigated government-led pre-disaster communication mechanisms in marginalised areas in the Philippines. Qualitative field work revealed political, trust and access issues in what remains a top-down engagement style. The proposed PRETE framework centres on power, relationships, and experience as an inclusive approach to the preparation phase of pre-disaster communication.

**Jason Sun***Doctor of Philosophy*

Dr Sun studied ceria-based materials for dry reforming of methane. The research revealed the potential of low-temperature dry reforming of methane over a small loading amount of Ru onto ceria-zirconia mixed oxides. These findings could pave the way for high quality hydrogen production.

**Xi Sun***Doctor of Philosophy*

Dr Sun studied the water use by different tree species and the impact of trees on soil desiccation. The research revealed that soil shrinkage settlement was the greatest closer to the tree's drip line than soil most distant from the tree. The findings improve the current footing design guidelines.

**Sy Nurleyana Wafa Sy Naguib Wafa***Doctor of Philosophy*

Dr Wafa investigated the views of agency practitioners and clients about the use of augmented reality technology (AR) in marketing communications. Her research advances the understanding of AR in the marketing industry by developing a definition, framework, and model that aid professionals when deciding to use AR in marketing campaigns.

**Syed Muhammad Shehram Shah***Doctor of Philosophy*

Dr Shehram investigated verbal and non-verbal characteristics of human behaviour to develop a computational framework for prediction of inter-personal trust. The research laid the groundwork for the application of computer engineering and Artificial Intelligence techniques into social signal processing for correlating trust with human behaviour.

**Marcel Takac***Doctor of Philosophy*

Dr Takac investigated barriers to virtual reality (VR) implementation in psychotherapy. Five barriers were identified and addressed: inadequate clinical relevance within VR literature, VR misclassification, poor VR familiarity, low VR confidence, and inadequate VR training. The findings and proposed strategies improve VR opportunities in mental health and other VR-focused disciplines.

**Kendall Peter Taylor***Doctor of Philosophy*

Dr Taylor investigated preference learning for multi-objective optimisation problems. The research produced a novel method for efficient learning of a decision-maker's preferences for multi-objective optimisation problems. The outcome contributes to enhancing insight into multi-objective optimisation algorithms and the effective acquisition of preference to guide the search for solutions.

**Jacquelynn Xueting Tian***Doctor of Philosophy*

Dr Tian researched into radially braided aerospace carbon fibre composites - their manufacturing, microstructure and mechanical properties. She investigated damage to carbon fibres during braiding and studied the interactions between the braiding process and the properties of braid fabrics and braided composites. She also developed hybrid-material braids for aerospace applications.

**Chloe Violette Tiennot***Doctor of Philosophy*

Dr Tiennot worked on expanding the scope of the economic complexity and economic development literature to microstates. She identified barriers to the complexification of microstates' economies; and developed two methodologies for measuring economic complexity in data-constrained microstates. These tools are useful for performing growth diagnoses and policy analyses in microstates.

**Rance Brennan Bolisliis Tino***Doctor of Philosophy*

Dr Tino investigated the use of material-extrusion 3D printing to develop personalised phantom models for radiotherapy treatment planning. The research demonstrates the use of polymer/composite filaments to emulate human tissue densities for imaging and dosimetry. These findings enhance our understanding of the advancing radiotherapy technology to optimise patient treatment outcomes.

**Nhi Thao Tran***Doctor of Philosophy*

Dr Tran investigated the use of fetal creatine supplementation for hypoxic brain injury. The research reported an amelioration of neuropathology and pathophysiology following acute in utero hypoxia with creatine treatment. These findings provide the first preclinical evidence supporting creatine supplementation during pregnancy to potentially improve the prognosis of newborn babies.

**Tran Ky Viet***Doctor of Philosophy*

Dr Tran investigated the relation between institutional quality and foreign direct investment in Vietnam. This study suggested that the institutional quality in Vietnam is reflected differently by foreign investors with different investment strategies, with different modes of business and with different nationalities.

**James Tran***Doctor of Philosophy*

Dr Tran investigated the recovery of neural tissue following penetrating brain injury in the adult spiny mouse. This research found differences in the reparative and regenerative response of the spiny mouse brain in comparison to conventional laboratory rodents, providing new insights into how brain injury can be repaired.

**Federico Angelo Triolo***Doctor of Philosophy*

Dr Triolo investigated how the iconic product of coffee maintained its iconic status throughout time in the context of the three waves of coffee. This led to the conceptualisation of coffee as a metamorphic product enabled by entrepreneurial practices

**Kyle Edwards Tucker***Doctor of Philosophy*

Dr Tucker studied the control of autonomous vehicles at the limits of handling. The research revealed a new autonomous vehicle control framework, capable of manoeuvring vehicles in transient and on-limit situations. Improvements to the control structure are intended to advance the handling capacity and safety of autonomous vehicles.

**Aditi Upadhyay***Doctor of Philosophy*

Dr Upadhyay investigated wave matter interaction through exploitation of efficient micro-nano devices which were realised by novel fabrication techniques.

**Stefani Vasil***Doctor of Philosophy*

Dr Vasil investigated how migrant women experience family violence and access support. Through interviews with migrant women and stakeholders, the thesis explored the ways insecure migration status intersected with other social inequalities. These structural factors exacerbated women's isolation and limited their autonomy, placing them at greater risk of further violence.

**Pertie Panopio Velasco***Doctor of Philosophy*

Dr Velasco investigated the effect of operating time on the performance of hollow fibre membrane contactors (HFMCs) in recovering dissolved methane from anaerobic effluents. The research produced a numerical model that estimates the performance of an upscaled HFMC. This leads to more sustainable and carbon-neutral wastewater treatment systems.

**Yujia Wang***Doctor of Philosophy*

Dr Wang investigated a distinct slope-stabilisation method which has been used widely in South Gippsland in the Victoria state. This method integrates two well-developed methods, which are laterally loaded pile and the geogrid reinforced retaining wall with gabion basket facing. The performance of this system has been illustrated and demonstrated.

**Yanlin Wang***Doctor of Philosophy*

Dr Wang studied the fracture behaviour of steel and extended its application in reliability analysis. This research found that the fracture resistance of steel under various in-plane loading is attributed to the plastic strain concentration, crack tip blunting and fracture mechanism. These findings enhance our understanding of fracture mechanics.

**Song Wang***Doctor of Philosophy*

Dr Wang studied the network security in the software defined networks. The research focused on the detection and mitigation of distributed denial of service attacks using python-based algorithms and machine learning models. The findings enhance the potential countermeasures against network threats in the software defined networks.

**Rosalind Ward***Doctor of Philosophy*

Dr Ward examined the backlash against the Safe Schools program in Australia using autotheoretical writing to explore the ideological and material role of the heteronormative family. Marxist theory was used to understand the negative political responses to supporting gender and sexual diversity in schools in a context of broader crises.

**Peter Wyndham Westwood***Doctor of Philosophy*

Dr Westwood explored painting practice as an enquiry into ongoing change in capital based cultural economies. The production of artworks and their presentation through exhibition space and design addressed concepts of capriciousness and equivocality. Research outcomes suggest that in embodying a spirit of flux, painting appositely echoes an unstable present.

**Phoebe Welman Whitman***Doctor of Philosophy*

Dr Whitman explored the concept of surface as a site of encounter to shift people's experience and perception in their everyday surroundings. Through experiments in capturing the ephemeral and sensation as a practice of surfacing, the research-practice offers new ways of practicing and teaching interior design through valuing surface encounters.

**Fitri Widhiastuti***Doctor of Philosophy*

Dr Widhiastuti investigated the degradation of bisphenol A in municipal wastewater reverse osmosis concentrate using ferrate(VI). The research revealed that ferrate(VI) or ferrate(VI) combination with second oxidant successfully degraded bisphenol A in municipal wastewater reverse osmosis concentrate. The findings demonstrate the potential application of ferrate(VI) in water and wastewater.

**Rochelle Wilson***Doctor of Philosophy*

Dr Wilson conducted an experimental analysis of the motivational, linguistic, deontic, behavioural, and emotional effects of partial and conditional promises on trust. Suggesting: although full promises are most efficient in promoting trust; conditional and partial promises are equally efficient in promoting trustworthiness. Policy advocates using alternative promises under risk.

**Deni Wright***Doctor of Philosophy*

Dr Wright investigated the importance of aligning project management methodology to the type of project in Information Technology projects, and the influence this alignment has on improving project success. The results confirmed alignment has no influence on project success however organisational maturity and project management methodology play a positive role.

**Ge Wu***Doctor of Philosophy*

Dr Wu studied the machining of thin-wall components by considering flexible deformation and cryogenic minimum quantity lubrication technology. The research revealed the interactions between thermal-mechanical coupling and part deflection, and demonstrated the feasibility of the new cooling approach. The outcomes contribute to the precise and cleaner manufacturing of thin-wall products.

**Soniya Tom Xavier***Doctor of Philosophy*

Dr Xavier investigated the role of microglia, brain's primary immune cells, in the initiation of two female-prominent neurological disorders, multiple sclerosis and postpartum depression/anxiety. Her research helps to understand the molecular mechanisms of sex differences in brain health and disease.

**Hujin Xie***Doctor of Philosophy*

Dr Xie investigated biological tissue deformation models for surgical simulation. The research is based on Kalman filter and finite element method. The proposed method achieves real-time and accurate modelling of the biomechanical behavior of biological tissues.

**Michelle Mengjiao Xu***Doctor of Philosophy*

Dr Xu studied fresh meat biopreservation using microbial protective cultures. The research demonstrated the potential of using protective cultures as natural antimicrobials for fresh red meat shelf-life extension and revealed high consumer acceptance of this approach. The findings advance the development and adoption of fresh meat biopreservation using protective cultures.

**Hu Xu***Doctor of Philosophy*

Dr Xu studied the piezoelectric properties of triply periodic minimum surface structures (TPMS). The research produced that ceramic parts with TPMS exhibit much better piezoelectric performance than existing piezocomposites under the compressive and shear strain. These findings enhance our understanding of the application development of piezoelectric materials.

**William Anthony Yanko***Doctor of Philosophy*

Dr Yanko explored Indonesian hip hop from 1998 to today. Political theory was the analytical tool. His fieldwork included interviews and digital ethnography. Results show how rappers act as sociopolitical brokers for activism, resistance, authenticity and conservatism. He created a map of these findings to prompt further scholarly investigation.

**Jianchun Yao***Doctor of Philosophy*

Dr Yao researched the modular transfer matrix method to predict the vibrational comfort of vehicle occupant by combining numerical transfer matrices of subsystems. This method allows the combination of conventional finite element model data and the experimental data of subsystems to accurately predict the dynamic performance of the complex structure.

**Suk Hyun Yeo***Doctor of Philosophy*

Dr Yeo conducted multi-objective design optimisation of downscaled cusped field thruster (CFT). The research identified the optimal design trends associated with underlying physics and the influence of design variations and magnetic field distributions on CFT performance. These findings provide new insights into key design factors for successful CFT downscaling.

**Simin Younesi***Doctor of Philosophy*

Dr Younesi investigated the role of monocytes in the maintenance of ovarian follicle health. She examined whether an acute disruption to the ovarian immune milieu disrupts ovarian follicle health. She also assessed the influence of immune cell manipulation in the neonatal period on adult ovarian health and fertility potential.

**Miao Yu***Doctor of Philosophy*

Dr Yu studied information diffusion and stock performance in the Australian equity market. The research revealed the impact of economic links, in particular firms position in the trade network, on information diffusion and stock returns. The findings enhance our understanding of the asset pricing implications of economic links.

**Syedmojib Zahraee***Doctor of Philosophy*

Dr Zahraee researched sustainable biomass supply chain optimisation by developing a dynamic simulation and multi-objective mathematical model. The research explored minimising transportation costs and environmental emissions and promoting job creation. The findings aid decision-makers in defining policies to reduce emissions and cost-effective strategies for transportation technologies in the biomass industry.

**Zhang Neng***Doctor of Philosophy*

Dr Zhang investigated the effects of physical vibration transmitted from car seats on driver drowsiness. He also developed piezoelectric devices to control the vibration to prevent vibration-induced drowsiness and improve riding comfort. His research has a significant contribution to road safety and the future design of vehicle seats.

**Jingwen Zhao***Doctor of Philosophy*

Dr Zhao explored the influence of geometrical and material design parameters on the acoustic properties of metamaterials. She developed a novel design methodology for creating devices by exploiting nonlinear and non-periodic microstructures. The outcomes of her research pave the path to realising the full potential of acoustic metamaterials.

**Zhu Xinhe***Doctor of Philosophy*

Dr Zhu investigated the Kalman filtering methodologies for dynamic characterisation of biological systems. This research constructed multiple mathematical models for COVID-19 spread and soft tissue contact. The corresponding modified EKF algorithms were proposed to characterise these models. These findings provide insight to understand the dynamic biological behaviors.

**Fei Zhu***Doctor of Philosophy*

Dr Zhu explored the issue of security vulnerabilities, privacy leakage, and low efficiency problems of existing data authentication protocols for IoT applications. The thesis provided several practical privacy-preserving signature schemes for applications such as healthcare IoT, smart grids, vehicular ad-hoc networks, and wireless medical sensor networks.

**Chengbo Zhu***Doctor of Philosophy*

Dr Zhu studied 3D printing of white cast iron. The research led to the successful elimination of cracking in the brittle alloy and improvement in the wear performance. The findings add value to Australian manufactured products and accelerate the adoption of 3D printing in the mining industry.

**Kun Zou***Doctor of Philosophy*

Dr Zou investigated a smartwatch shape device to restore the driver alertness using a designed vibration stimulation during driving tasks. He also studied the deep learning method to detect the drowsiness and distraction of the drivers. The outcomes of this research prevent drowsy driving and improve road safety.

**Karma Zuraqi***Doctor of Philosophy*

Dr Zuraqi investigated the use of liquid metals for CO<sub>2</sub> decomposition. This led to the development of a process that enables the direct conversion of CO<sub>2</sub> to solid carbon at mild temperatures. These findings inspired further investigations into liquid metal nanodroplet formation methods to enhance their performance in reaction applications.

# 2022 Vice-Chancellor's List for Academic Excellence

## College of Business and Law

### Postgraduate

**Alison Patricia Lettin**  
Master of Information Management

**Melissa Kim Turner**  
Master of Business Administration

**Niroshini Sharmila Perera**  
Master of Human Resource Management

**Olga Papageorgiou**  
Master of Data Science Strategy and Leadership

**Guy Timothy Cullen Holder**  
Graduate Certificate in Business Administration

**Damian James Pennyfield**  
Graduate Certificate in Business Administration

**Hayden Trent Reed**  
Graduate Certificate in Business Administration

**Shayne Richard Raureti Harris**  
Graduate Certificate in Marketing

**Brenton Craig Neighbour**  
Graduate Certificate in Marketing

**James Paul Gould**  
Graduate Certificate in Supply Chain and Logistics Management

**Nathan Daniel Healy**  
Graduate Certificate in Supply Chain and Logistics Management

**Oliver Ryan Thacker**  
Graduate Certificate in Supply Chain and Logistics Management

**Tracy Ann Formosa**  
Graduate Certificate in Information Management

**Claire Miriana Fristacky Buckley**  
Graduate Certificate in Professional Accounting

**Sarah Nicole Hansen**  
Graduate Certificate in Human Resource Management

**Julie Anne Hepburn**  
Graduate Certificate in Human Resource Management

**Zosia Frances Smith**

Graduate Certificate in Product Management

**Sharon Leigh Loder**

Graduate Certificate in Emerging Technologies and Law

**Jordan Barrett D'Andrea**

Graduate Certificate in Customer Success Management

**Nadine Wessel**

Graduate Certificate in Customer Success Management

**Roger McCarthy**

Graduate Certificate in Digital Transformation

**Dianne Kathryn Worrall**

Graduate Certificate in Digital Transformation

**Matthew Steven Green**

Graduate Certificate in Blockchain Enabled Business

**Louis Victor Shivarev**

Graduate Certificate in Blockchain Enabled Business

**Nathan Van Den Bosch**

Graduate Certificate in Blockchain Enabled Business

**Trudy Rachel Doe**

Graduate Certificate in Business Analytics

**Justine Elizabeth Stamford**

Graduate Certificate in Business Analytics

**Lyndon James Urquhart**

Graduate Certificate in Cyber Security Governance and Risk Management

### Undergraduate

**Joshua Paul Divito**

Bachelor of Business (Honours)

**Jia Wei Koh**

Bachelor of Business (Professional Accountancy)

**Cheng Man Nga**

Bachelor of Business (Economics and Finance)

**Skye Lotus Clancy**

Bachelor of Business (Economics and Finance)

**Kwa Tin Cheng**

# Academic Dress

## COLOURS OF HOODS FOR DISCIPLINES

Applied Science		Honeysuckle
Architecture		Cherry
Arts		Magenta
Business		Heliotrope
Design		Silver grey
Education		Turquoise
Engineering		Spectrum blue
Health Science		Violet
Law		White
Nursing		Fuchsia
Pharmacy		Opaline green
Public Health		Peacock green
Social Science		Buttercup
Social Work		Powder blue
Technology		Spectrum green
Doctor of Philosophy		Scarlet red

**CHANCELLOR**—a gown of black cloth with trimming of metallic gold lace with finer silver edging cord and bearing the coat of arms on each sleeve, red satin lining and a black velvet bonnet with gold trimming.

**DEPUTY CHANCELLOR**—a gown of black cloth with trimming of metallic gold lace with finer silver edging, red satin lining and a black velvet bonnet with gold trimming.

**VICE-CHANCELLOR and PRESIDENT**—a gown of black cloth with trimming of metallic gold lace and bearing the coat of arms on each sleeve, red satin lining and a black velvet bonnet with gold trimming.

**COUNCIL MEMBERS**—the habit of their degree, or a gown of black cloth with fine gold metallic trim, red satin lining and a black trencher with gold trimming.

**RMIT STAFF**—the habit of their degree, or a black gown and black trencher if they are not graduates of any university.

**DOCTORS OF PHILOSOPHY**—a gown of black cloth faced with scarlet silk together with a hood of scarlet cloth edged with scarlet silk, and a black velvet bonnet.

**OTHER DOCTORS**—a gown of scarlet cloth faced with silk the colour of the discipline of the award, together with a hood of black lined with the same colour silk as the facing of the gown, and a black velvet trimmed bonnet.

**MASTERS and JURIS DOCTOR**—a black gown with a hood of black silk lined with silk the colour of the discipline of the degree, and a black trencher with black silk tassel.

**GRADUATE DIPLOMAS and GRADUATE CERTIFICATES**—a black gown, a square-collared black silk stole faced with the colour of the discipline of the award, and a black trencher with a black silk tassel.

**BACHELORS**—a black gown and a hood of black silk edged with white braid and lined with silk the colour of the discipline of the degree, and a black trencher with a black silk tassel.

**ASSOCIATE DEGREES**—a black gown, a square-collared silk stole faced with silk the colour of the discipline of the award and edged with black braid, and a black trencher with a black silk tassel.

**ADVANCED DIPLOMAS, DIPLOMAS and CERTIFICATES**—a black gown, a square-collared silk stole faced with silk the colour of the discipline of the award and edged with white braid, and a black trencher with a black silk tassel.

**ABORIGINAL AND TORRES STRAIT ISLANDER GRADUATES**—may wear a square-collared stole faced with Aboriginal or Torres Strait Island colours in conjunction with their graduation gowns.

# Coat of Arms

# The Mace

The Coat of Arms was officially designed in 1986 to coincide with the 1987 Centenary Year of RMIT and to be an ongoing symbol for the University.

Approved by the College of Arms, the Coat of Arms is a mark of great dignity and embodies a rich symbolic language. The crest of wattle

defines this Coat of Arms as uniquely Australian.

The shield itself symbolises the immutable strength of education. The ancient lamp on the shield, which featured prominently in former Badges of the University, is a symbol of enlightenment. St Edward's Crown, used in accordance with the permission granted by Her Majesty, Queen Elizabeth II, is boldly highlighted on the chevron. In chief on the shield are two four-pointed stars representing enlightenment and skill.

*Perita Manus Mens Exculpta*, the RMIT motto, meaning 'a skilled hand, a cultivated mind', continues to be most relevant to the variety of programs offered by the University. Supporters of the Coat of Arms are the Lion and the Kangaroo. The rampant Lion is derived from Supporters of the Coat of Arms of Lord Melbourne, Prime Minister of Great Britain, after whom Melbourne was named in 1837. The Kangaroo Supporter is an emblem of Australia. The Coat of Arms thus uses emblems to acknowledge the Royal Patronage, indicate a pride in Australia and proclaim Melbourne as the foundation city of the University. Symbols of enlightenment and knowledge point to RMIT's concern to transform the future and the important role of the University in its community.

The mace symbolises the authority of the Chancellor as ceremonial head of the University. This badge of the office of Chancellor dates from late medieval times. The mace was designed and 3D printed by RMIT staff in the disciplines of architecture and design, gold and silversmithing and mechanical engineering in 2015. The mace design is algorithmically generated and titanium 3D printed as one unibody symbolising the past and present knowledge that exemplifies RMIT as a university of technology, design and enterprise.

## THE UNIVERSITY SEAL

Each of the graduation certificates has been sealed with the University Seal.

## RMIT MOTTO

*Perita Manus Mens Exculpta* — 'a skilled hand, a cultivated mind'.

# About RMIT University

RMIT Graduates

Melbourne City campus

Ho Chi Minh City campus

RMIT is an international university of technology, design and enterprise with more than 96,000 students and close to 10,000 staff globally. We empower people and communities to adapt and thrive across generations, with education, research and civic engagement that are applied, inclusive and impactful.

RMIT's presence around the world enables students and staff to benefit from the exchange of ideas and research across a broad ecosystem. Our three main campuses in Melbourne are located in the heart of the City, Brunswick and Bundoora. Other Victorian locations include Point Cook, Hamilton and Bendigo. We also have two campuses and a language centre in Vietnam and a research and industry collaboration centre in Barcelona, Spain. In addition, programs are offered through partners in Singapore, Hong Kong, Sri Lanka and mainland China, with research and industry partnerships on every continent.

We continue to consolidate our reputation as one of the world's leaders in education, applied and innovative research. RMIT is ranked 190th in the 2023 QS World University Rankings, 209th in the 2023 US News Best Global Universities Rankings and is in the world's top 400 in the Academic Ranking of World Universities (ARWU). RMIT also ranked 22nd in the 2023 Times Higher Education (THE) World University Rankings, 22nd in the 2022 THE Impact Ranking and =53rd globally in the QS Sustainability Rankings.

Core to our reputation is educating highly employable graduates and global citizens, ready to contribute in complex times. Our diverse global community of 480,000+ graduates, live and work in more than 150 countries around the world. We are committed to lifelong education and welcome our alumni back throughout their careers to top-up their skills or change their direction all together.

At every stage, we continue to work respectfully with, and learn from, the history, knowledge and experience of Australia's First Nations Peoples. This is woven through all that we do.

For more information, visit [rmit.edu.au/about](https://rmit.edu.au/about).

# RMIT Alumni Get Connected

Congratulations, you made it! You are now part of RMIT's 480,000 strong alumni network.

Make the most of your alumni experience and get connected to a whole new range of exclusive benefits, networking opportunities and further learning.

As a new alumnus, you have 12 months access to:

-  skill-building workshops
-  1:1 career consultations and job opportunities
-  monthly alumni advice and tips
-  alumni giveaways and discounts
-  exclusive events

and it's all free!

Keep an eye on your inbox for details!
