I hope you love them too.

Velvet Shade Pot Collection ❁

I'm in danger of saying this too often...but REALLY, you have to wrap yourself up in this lot and go to a party - or if you don't feel like it, just tuck yourself in and go to sleep. Few plants have texture like this! This trio grew very happily in our Dutch Yard against the farmhouse in dappled shade. The one thing we had to do was cut a few tresses off the petunia every month or so, to stop it swallowing up the others.

Scented Pelargonium Collection

I'm obsessed by these four, scented-leaved pelargoniums. I pick the foliage for very long-lasting arrangements, use the edible flowers to decorate puddings, and harvest the leaves all the time to use as flavouring and to make delicious cordials (see our website for recipe ideas). PLUS they look fantastic.

Pelargoniums are durable, beautiful and easy; they make some of the best ever, drought resistant, summer pot and garden plants. I love them in winter too, brought inside to put on window ledges.

TP Aspect: Full sun. 🌸 June-November.

5 reasons to grow pelargoniums

- they are some of the best pot plants you can grow
- when the frosts start, you can bring them inside as houseplants to decorate your window ledges
- many have deliciously scented leaves
- they make wonderfully flavoured teas and their flowers are edible
- with stem ends seared, leaves last up to a month in a vase

Dahlia Notes

- our dahlias are first class tubers, the best you can buy (sizes will vary, even within a variety)
- choose from tubers to pot yourself, or let us do the work for you and buy bushy 3L pots
- they're low-maintenance. Unless you have very hard ground frosts, mulch them deeply in winter and leave in the ground from one year to the next
- if you keep picking them, each tuber will give you buckets of flowers from July until the first frosts
- remember they're edible. Scatter their colourful petals over salad

- soak for up to an hour to rehydrate before planting out
- dig a deep hole, make sure it's wide enough for all the roots
- sprinkle some Rootgrow (page 91) over the damp roots, with the plant held over its planting hole to aid establishment
- when you plant, ensure the crown of the plant is level with the soil surface
