

Kristian Fauchald original taxa names

Listings of the original Polychaeta (Annelida) taxa names — species, families, and genera — published 1965 to 2012 by Kristian Fauchald (1935 – 2015), with their current status, as recorded in the World Polychaeta Database of the World Register of Marine species (WoRMS) as at 1 June 2015, which would have been Kristian's 80th birthday. This day is designated the first International Polychaete Day in his honor. Kristian created 34 new genera, and over 250 names remain valid of the species names he and his co-authors published, spread over nearly 40 families. Kristian Fauchald originated the World Polychaeta Database and compiled it up until 2009. In the listings names are grouped or ordered alphabetically by family.
