

OVERVIEW

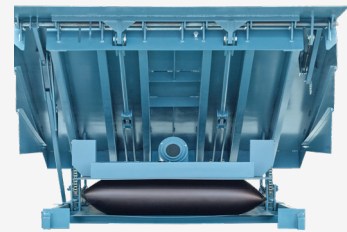

Brakebush operates several busy cold-storage facilities with frequently used shipping docks. They worked with the experts at Shoppa’s Material Handling to outfit their facilities with state-of-the-art Nordock dock levelers, seals, shelters and vehicle restraint systems to ensure their team members, product and equipment were safe.

CHALLENGE

- **Reduced Driver Fatigue and Injury:** Their forklift operators enter and exit trailers at the shipping dock on stand-up forklifts throughout the day. They desired a smooth transition from the facility to the trailer that would reduce driver fatigue and prevent injury.
- **Reliable Operation and Seal:** These food-grade cold-storage facilities need to avoid energy loss at the dock, keep pests out and ensure long-lasting operation in a rugged environment.
- **Vehicle Restraint Safety:** Keeping the team and product safe is a top priority for Brakebush. They were prepared to go beyond minimum safety requirements and invest in a high-quality vehicle restraint system that would prevent dangerous injuries and damage to equipment.

RESULT

Bakebush has put the total package to good use in their high-volume facilities and they are impressed with the increased safety, comfort and rugged design offered by the Norddock products. They continue to receive expert scheduled maintenance and support from Shoppa's Material Handling for dock and warehouse equipment needs.

SOLUTION

- **Nordock FLEX-LIP® Equipped Dock Levelers:** When a Norddock dock leveler is upgraded with the flex-lip feature it ensures the transition from leveler to trailer is luxuriously smooth for the forklift operator. This was a natural choice to address Brakebush's needs.

- **Nordock Seals and Shelters:** A complete seal and shelter solution from Norddock was perfect to keep cold air in and pests out. These seals and shelters are proudly manufactured in the USA.

- **Nordock AR-10K SMART-HOOK® Restraints:** This premium automatic vehicle restraint is designed to prevent unscheduled departure, trailer creep and tip overs by using a large rotating hook to secure a trailer's rear impact guard (RIG).
