Man and Machine: Combining Automation Tools with the Human Mind

Presented by:

**Jonathan Kohl
Kohl Concepts, Inc.**

Presented at:
STAREAST Software Testing Analysis & Review
May 5-9, 2008; Orlando, FL, USA

330 Corporate Way, Suite 300, Orange Park, FL 32043
888-268-8770 • 904-278-0524 • sqeinfo@sqe.com • www.sqe.com

Jonathan Kohl

Jonathan Kohl is the founder and principal software testing consultant with Kohl Concepts Inc., based in Calgary, Alberta, Canada. A noted testing thinker, Jonathan is recognized as a leader in the exploratory testing community. He is a popular author and speaker who believes that testing is a challenging intellectual craft. Jonathan's blog on software development and testing issues is one of the most well-read testing blogs in the industry. Jonathan is a regular contributor to Better Software magazine, as an author and technical editor.

:: Man and Machine

Combining Automation Tools with
the Human Mind

∴ Many Automated Testing Efforts Fail

Automation Problems

- High maintenance costs, increasing over time
- Overly-focused on automating regression tests
- Heavy reliance on the user interface (brittle tests that require a lot of rework)
- It is **software development**; therefore subject to **software problems**
- Tools can't replicate what skilled human testers do

:: Manual Testing Can Be Slow

Manual Testing Problems

- Time consuming
- Testers don't make good use of tools
- Computers are better at computing
 - Making calculations
 - Repetitive tasks that don't require thought
- Often too focused on the user interface
- Difficult to repeat some tasks

⋮⋮ Idea: Combine Human & Machine

⋮⋮ How Other Disciplines Automate

•• Key ideas from other disciplines

- Automation is under human supervision
- Automation complements skilled human efforts
- It is very difficult to automate a service
- It is impossible to automate:
 - intelligence
 - curiosity
 - intuition

•• Example: Automated Test Fixture

Use a GUI-driving tool

- Automate test setup for exploratory testing
- **Simulate** typical usage
- Repeat tasks
- Perform calculations

:: Human Supervision

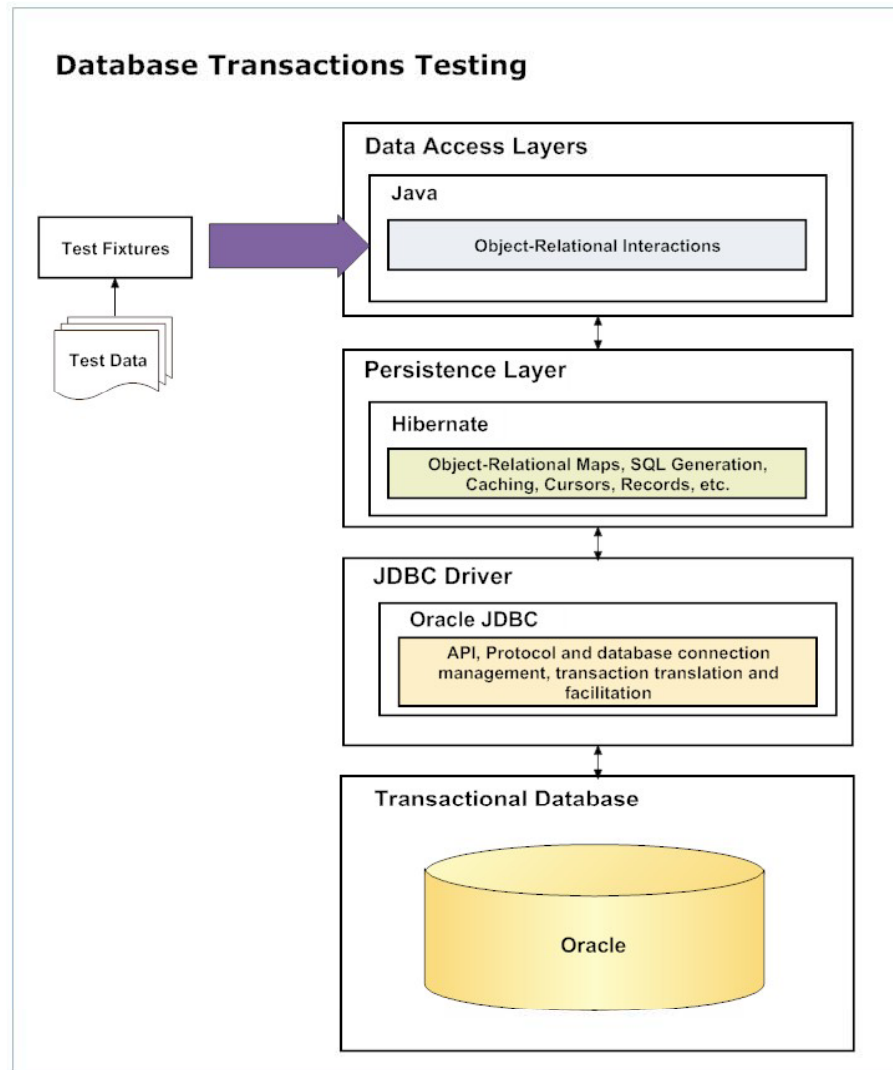

:: Example: System Monitoring

Supervision

- Creating **visibility**: *What's going on behind the scenes?*
- Log File Monitoring
- Transaction visualization
 - Topic readers
 - Data transactions
- System monitors

Alternative Testing Interfaces

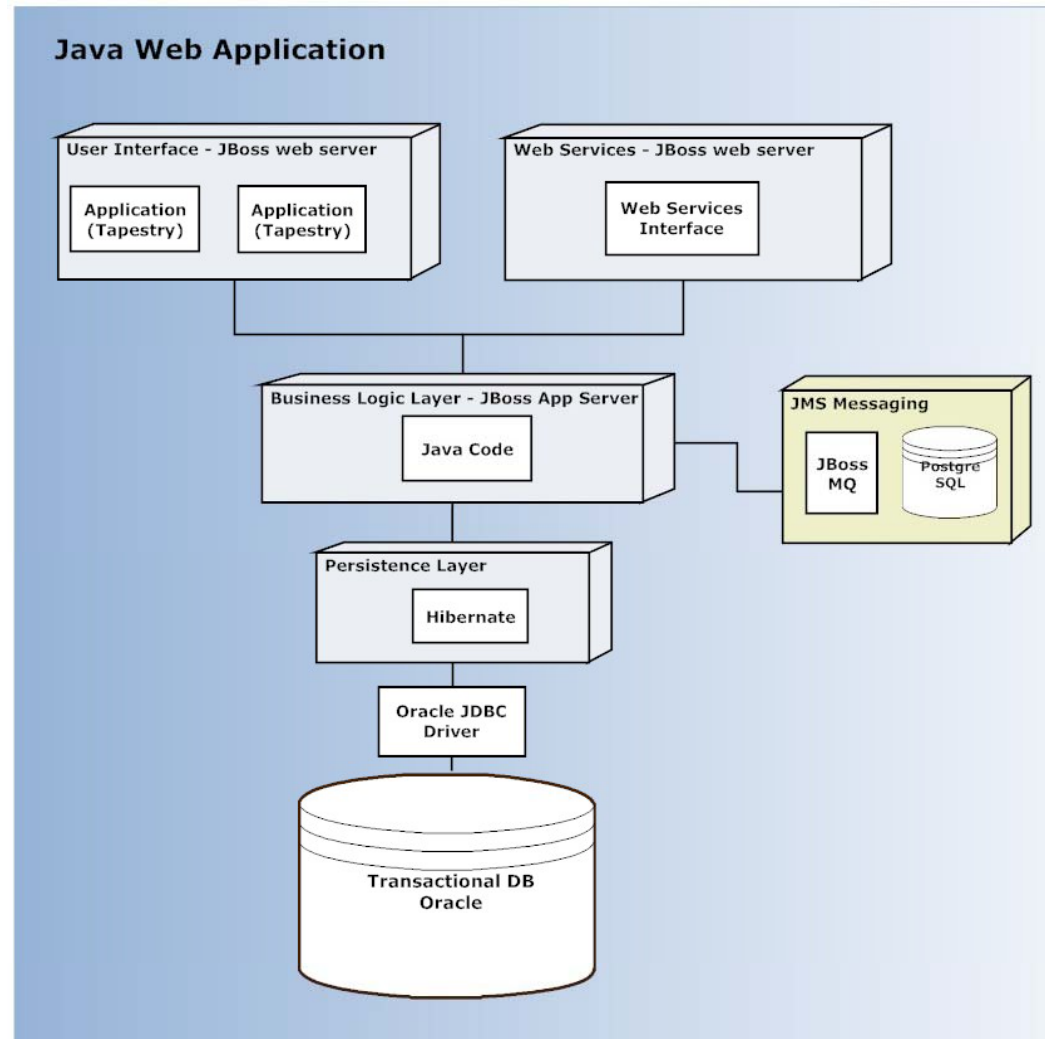

:: Example: Side-Door Testing*

Use a Testable Interface (other than the UI)

- Use built-in or custom APIs
- Test Data Creation
- Event, Transaction Simulation
 - web services
 - FIT (framework for integrated testing)
 - Custom testing interface

*Andrea, Jennitta. *Functional Test-Driven Development for Legacy Systems*. Presentation

Alternative Testable Interfaces

Interactive Automated Testing Hints

- Don't try to do too much – go for low effort, **high-value**
- Don't try to replace human testing, try to **enhance** human testing
- Stop focusing on regression testing, focus on providing testers with more power
- Think about **simulation** rather than replacing manual testing
- Determine your automation **goals**
