# Targeted Mechanism of Action:

NCI 60 human tumour cell line

- Pattern of 60-cell selectivity is similar to that for bafilomycins and concanamycins
- Salicylihalamides, Lobatamides and Chondropsins inhibit *non fungal* vacuolar ATPase (V-ATPase) at low nanomolar levels

*J. Pharmacol. Exp. Ther.* **297**: 114, 2001.

## Marine Natural Products and Related Compounds in Clinical and Advanced

### Preclinical Trials

**Table 1.** Status of Marine-Derived Natural Products in Clinical and Preclinical Trials

name source status (disease) comment

didemnin B	<i>Trididemnum solidum</i>	Phase II (cancer)	dropped middle 90s
dolastatin 10	<i>Dolabella auricularia</i> (marine microbe derived; cyanophyte)	Phase I/II (cancer)	no further trials
giroline	<i>Pseudaxinyssa cantharella</i>	Phase I (cancer)	discontinued
bengamide	<i>Jaspis</i> sp.	Phase I (cancer)	licensed Novartis
cryptophycins	<i>Nostoc</i> sp. & <i>Dysidea arenaria</i>	Phase I (cancer)	licensed to Lilly
bryostatin 1	<i>Bugula neritina</i>	Phase II (cancer)	licensed to GPC Bio
dolastatin	<i>Dollabella</i>	Phase II (cancer)	melanoma, breast,
ecteinascidin	<i>Ecteinascidia turbinata</i>	Phase II/III (cancer)	licensed to J&J
aplidine	<i>Aplidium albicans</i>	Phase II (cancer)	
<b>E7389 (Hali B)</b>	<b><i>Lissodendoryx</i> sp</b>	<b>Phase I (cancer)</b>	<b>Eisai</b>
discodermolide	<i>Discodermia dissoluta</i>	Phase I (cancer)	licensed to Novartis
kahalalide F	<i>Eylsia rufescens/Bryopsis</i> sp.	Phase II (cancer)	licensed to PmMar
Spisulosine	<i>Spisula polynyma</i>	Phase I (cancer)	Rho-GTP inhibitor
HTI-286	<i>Cymbastella</i> sp	Phase II (cancer)	licensed to Wyeth
KRN-7000	<i>Agelas mauritianus</i>	Phase I (cancer)	
squalamine	<i>Squalus acanthias</i>	Phase II (cancer)	antiangiogenic
Laulimalide	<i>Cacospongia mycofijiensis</i>	preclinical (cancer)	
Curacin A	<i>Lyngbya majuscula</i>	preclinical (cancer)	
vitilevuamide	<i>Didemnum cucliferum &amp; Polysyncraton lithostrotum</i>	preclinical (cancer)	
diazonamide	<i>Diazona angulata</i>	preclinical (cancer)	
eleutherobin	<i>Eleutherobia</i> sp.	preclinical (cancer)	
sarcodictyin	<i>Sarcodictyon roseum</i>	preclinical (cancer)	
peloruside A	<i>Mycale hentscheli</i>	preclinical (cancer)	Just licensed
salicylihalimide	<i>Haliclona</i> sp.	preclinical (cancer)	
thiocoraline	<i>Micromonospora marina</i>	preclinical (cancer)	
variolins	<i>Kirkpatrickia variolosa</i>	preclinical (cancer)	
dictyodendrins	<i>Dictyodendrilla verongiformis</i>	preclinical (cancer)	licensed to Taiho
manoalide	<i>Luffariaella variabilis</i>	Phase II	discontinued
IPL-576,092	<i>Petrosia contignata</i>	Phase II	licensed to Aventis
ziconotide	<i>Conus magus</i>	Phase III pain	licensed to WL
CGX-1160 plus	<i>Conus geographus, catus, victoriae</i>	Phase I (pain)

# SUPPLY

- **Quantities Required**

- 1kg wet weight *Lissodendoryx* = 400ug Halichondrin B
- 450kg acorn worms = 1mg cephalostatin
- 1600 kg sea hares = 10mg dolastatin
- 2400 kg sponge = <1mg spongistatin
- 847 kg moray eel livers = .35mg ciguatoxin
- 22 tonnes of *Bugula neritina* for bryostatin I
- 1kg wet weight *Dysidea* = 3g Avarol

(Garson, 1994; Munro et al, 1998; Sipkema et al, 2005)

# Supply options

**Guarantee sufficient and sustainable quantities**

- wild harvest
- chemical synthesis
- aquaculture
- cell culture
- genomic splicing
- culture of symbionts

# Aquaculture of drug leads

Taken from Paterson and Anderson, Science 21 October 2005

## Bryostatin Analogue A Total Synthesis

## Yondelis (ET-743) Hemi-Synthesis

Phar ma Mar  
Soft Tissue Carcinoma active  
Licensed Europe  
September 2007

# Supply Side Opportunity

Resupply from harvest, aquaculture, fermentation, gene expression or synthesis, attuned to the stage of development and scale needed

# The natural non-drugs

- Functional foods (\$US5b+/yr)
- Food additives (\$US6b+/yr)
- Cosmetic's, sunscreen's (\$US 7b+/yr)

# Pseudopterrosins

*Pseudopterogorgia elisabethae*

**Pseudopterrosin A**

Anti-inflammatory added to skin care lotions

- \$7 b US/yr
- Patented by University of California (1989)
- Resilience® Estee Lauder
- Wild harvest in Bahamas, also cultured

## Sponge metabolites insecticidal against Lepidopteran pests:

- upto 95% growth inhibition of fifth instar larvae

Another reason for writing this paper is to increase our awareness of ecology. Ecology is the study of organisms in relation to their environment. More generally, it's a study of relationships in nature. As Americans, we have been slow to recognize some basic relationships about living on the earth. A good example of our ignorance is the increase of CO<sub>2</sub> we have allowed in our atmosphere. The increase in CO<sub>2</sub> may accelerate global warming, possibly causing droughts and crop failure.

Forestry and agriculture producers are in trouble with environmentalists because resource harvesters are reducing the carrying capacity of the land, while population requirements for food and fiber keep going up. In California soil erosion rapidly fills our bays, estuaries, and rivers with sediment, some of which was once soil sustaining the redwood forests of the north coast and a rich agricultural valley. Among other causes, soil erosion may have killed a run of chinook salmon once native to the San Joaquin River system.

Authors' addresses: B. Wyatt, University of California Cooperative Extension, 2604 Ventura Ave., Rm. 100P, Santa Rosa, CA 95403-2894; G. McGourty, County Court House, Agricultural Center, Ukiah, CA 95482.

to be an effective biopesticides against lepidopteran pests and larvae of *C. quinquefasciatus*.

Key words: Marine sponge, *Culex quinquefasciatus*.

### INTRODUCTION

Increasing use of synthetics leads to serious problems: environmental pollution, long term persistence, high insect resistance to insecticides. In recent years there has been increasing information on the use of alternative methods (Blunt *et al.*, 2005). The marine environment is an exceptional reservoir of bioactive natural products which produce several novel structures with unique biological properties which may not be found in terrestrial products (Thakur and Muller, 2004; Venkateshwarar *et al.*, 2008). The present investigations were aimed at identifying newer drugs and other pharmaceuticals from marine sponges whereas comparatively little attention has been paid to the discovery of pesticide molecules (Li *et al.*, 2006; Kim *et al.*, 2006). Again Venkateshwarar *et al.* (2008) suggested that the secondary metabolites isolated from the marine sponges may be an alternative source for control agents to replace the existing and highly toxic synthetic insecticides and will play an important role in future insecticide development programme. Prev Bradford *et al.* (1992) described the marine potential products to serve as insect control agents via mechanism of toxicity, interference with moulting of metamorphosis and feeding deterrence. Again Donia and Hamann (2005); Haefner (2005); Venkateshwarar (2008) demonstrated that the sponge consists of sesquiterpenes and diterpenes - secondary me

probably the ocean's only major agrochemical agents being used as insecticides in some parts of the world (10).

**Marine Natural Products as Insecticides, Herbicides, and Fungicides: An Update.** In our previous paper (11), the insecticidal compounds of marine origin and their activities were reviewed. In addition to developments summarized in our earlier paper, a new sesquiterpene, hydroxycoloroneone (6), was isolated from the soft coral *Nephthea chabrolii*, which showed strong

### 3. GROWTH POTENTIAL GLOBAL TRENDS

THE MARKET FOR BIOMARINE ECONOMY  
IS WORTH \$176 BILLION

# BUT...

Estimate  
for 2020

Marine biotechnologies represent only 8% of the total biotech market	15%
Marine bioplastic is less than 1% of the total biomaterial market	10%
Marine bio energies represent 1.5 % of the energy market	3%
Marine renewable energies are less than 8% of the energy market	17%
Aquaculture represents 12% of the global protein market	35%
Blue chemistry represents only 6% of the chemicals market	15%
Marine cosmetics account only for 13% of the cosmetics market	30%
Marine nutraceuticals represent 32 % of the nutraceuticals market	50%
Marine ingredients represent 38% of natural compounds market	55%
