# Eastern Highland Rim Prairie and Barrens

# **Conservation Opportunity Area**

**The Eastern Highland Rim Conservation Opportunity Area** (COA) is a patchwork of remnant prairies, barrens, and croplands. The flora of the prairie and barrens is highly diverse, with many relict species of the Atlantic Coastal Plain that once extended into this area. These remnant habitats are home to a diverse number of breeding grassland birds, such as Henslow's Sparrows, many of which are species of Greatest Conservation Need (GCN). Habitat conversion and fragmentation from agricultural development and succession of grasslands into forest have reduced the available habitat for this species to only a few patches suitable for breeding. Many of the remaining patches are too small to support breeding pairs.

Native American use of fire once played an important role in the natural maintenance of the prairies and barrens, reducing the amount of woody vegetation that otherwise encroaches into these systems. Likewise, hydrology has a large influence on woody succession; the extremely flat topography is underlain with a hard pan, which causes surface ponding of water that in turn controls the woody vegetation.

Small patches of forest once occurred only sporadically across the landscape in areas of higher elevation (steeper slopes) and better soils. However, lack of fire combined with altered hydrology (ditching and culverts) has allowed forests to expand beyond their former extent.

The largest threats to the prairies and barrens of this COA are habitat conversion for agricultural purposes and urban sprawl - both of which contribute to increased habitat fragmentation - as well as the elimination of fire from the ecosystem. This COA also encompasses several headwaters springs and tributaries that harbor many GCN fish species, including the Barrens Topminnow and the Barrens Darter. Invasive exotic fish species, stream habitat alteration, and overuse of water resources are a management challenge in these streams.

#### Public Lands within the COA

Arnold Engineering Development Center WMA, Bark Camp Barrens Wildlife Management Area (WMA), Headwaters WMA, Hickory Flat Woods WMA, Maple Springs WMA, May Prairie State Natural Area (SNA), Morrison Meadown, Normandy WMA, Old Stone Fort State Park (SP), Owl Hollow Mill WMA, Short Springs SNA, Tims Ford SP, Woods Reservoir Refuge

The flora of the Eastern Highland Rim is highly diverse, and its grasslands support a diversity of rare birds. The topography and hydrology of the barrens support characteristic herbaceous and forested wetland habitats.

### Partnerships

TWRA will increase connectivity between existing grasslands and wetlands by restoring and managing grassland habitats on public lands, as well as assessing the likelihood of increasing connectivity between public lands within the COA and improving stream habitats. Management strategies and restoration projects will be implemented on private lands within the COA through partnerships with U.S. Fish and Wildlife Service, the Natural Resources Conservation Service/National Water Quality Initiative, Arnold Air Force Base, Tennessee Valley Authority, Tennessee Dept. of Education and Conservation, the Tennessee Aquarium, The Nature Conservancy, other agencies and willing private landowners.

	Desired Change	Units
╋	Use government-funded incentive programs to encourage willing private landowners to restore critical land units and aquatic resources/BMPs	Number
╋	Restore pastures and agricultural lands to native ecosystems.	acres
╋	Restore riparian buffers and physical stream habitat in priority locations throughout the watershed.	miles
╋	Reintroduce prescribed fire into fire dependent grasslands and forest systems.	acres
╋	Develop and implement an integrated pest management plan to aid in the control of native and exotic pests.	acres
╋	Increase lands in conservation management by permanently protecting habitat through acquisition from willing private landowners.	acres
+	Improve population viability of native freshwater species.	animals
+	Encourage municipal and county governments to adopt zoning ordinances that limit or regulate development within critical units of aquatic, subterranean, and terrestrial habitats.	plans
