Preface

This revised district profile is an update of the previous profile produced in 2007. The development of the report was solicited by the President's Office – Regional Administration, Local Government and Special Departments (PORALGSD) with financial support from the United Nations Children's Fund (UNICEF). The Institute of Finance Management (IFM) was appointed to prepare the profile. The consultants worked closely with the PORALGSD. Members of the district teams were also involved throughout the entire exercise of data collection and validation of the report. Heads of department from the district and regional levels were trained on how to review and update a profile. The idea was to ensure that there is a necessary capacity to carry out a review of the profile in the next round.

The consultants would like to express deep gratitude for the support and cooperation provided by all individuals who were involved in this assignment, particularly staff from the regions, district offices, PORALGSD, OCGS and UNICEF. It was envisioned that the current profile should contain a time series data which is disaggregated up to the shehia level. The objective was not attained for most indicators mainly due to unavailability of data collected over a period of time and disaggregated up to the shehia level. It is our sincere hope that these gaps will be filled during the next review.

Chapter 1

Introduction

1 Introduction

1.1 Background information

Kaskazini B district is one of two districts of Kaskazini Unguja Region. It is located south of Kaskazini A district, about 11 miles from Mjini Magharibi, and also shares boundaries with the Kati district on the south-east, Magharibi district on the south-west and the Indian Ocean on the west and east.

The landscape of Kaskazini B is divided into two parts – the lowland area, which is about 95 per cent of the land, and the other part, covered by coral features. The coral land is mostly found along the coastal area, especially in the west and east of the district, while the lowland covers the remaining part of the district. The district has a tropical climate, with temperatures ranging between 20° and 40° centigrade. It also experiences a bimodal rainfall pattern – a long rainy season (or masika in Swahili) and a short rainy season (known as vuli in Swahili). The long rainy season is experienced during the months of March or April to May, while the short rainy season occurs during the months of September or October to December each year. The district receives between 900 mm and 1,200 mm of rainfall during the long rainy season and approximately 400 mm to 500 mm during the short rainy season. Such a rainfall pattern makes the district suitable for the production of various crops and rearing of livestock.

1.2 Administration

Kaskazini B is composed of a two-tier system of government – the local government authority (LGA) and the central government. The district director is the leader of the LGA while the central government is headed by a district commissioner (DC), who is assisted by the district administrative secretary (DAS). Within the office of the DC, there are 18 departments – agriculture, health, education, national identity, communication, human resources, youth, cooperatives, planning, forestry, sports and culture, livestock, fishery, children and women, legal, water, sports and coordination.

Political elected leaders in the district include a citizens' representative in the House of Representatives (Baraza la Uwakilishi), which deals with issues related to Zanzibar only. A second political elected leader is a member of Parliament, who represents the constituency in the National Assembly of the Union (Mainland and Zanzibar). A third political leader is a ward councillor, elected to represent citizens in the municipal council. Kaskazini B district has 4 constituencies, 8 wards and 31 shehias. Table 1 presents a list of constituencies, wards and shehias in the district.

The shehia is at the lowest level of the central government, led by a sheha, who is appointed by the minister responsible for regional administration. A sheha is responsible for facilitation of the registration of births and deaths as well as the coordination of other activities that may be assigned from time to time by the DC.

There is a clear demarcation between the responsibilities of the two government tiers. The LGA is responsible for issues related to the environment and the collection of levies within the district boundaries, whereas the DC's office oversees the provision of all public social services within the designated area, including security.

1.3. Structure of the report

This profile is structured in six chapters. Chapter 1 is the introductory section, which provides background information about the district. Chapter 2 describes the district's population characteristics. Chapter 3 elaborates on the main economic activities, while Chapter 4 provides crucial information on the status of social services within the district. Chapter 5 presents cross-cutting issues, such as the environment. Chapter 6 covers priority areas and recommendations. Finally, the SWOC analysis is included in the appendix.

Chapter 2

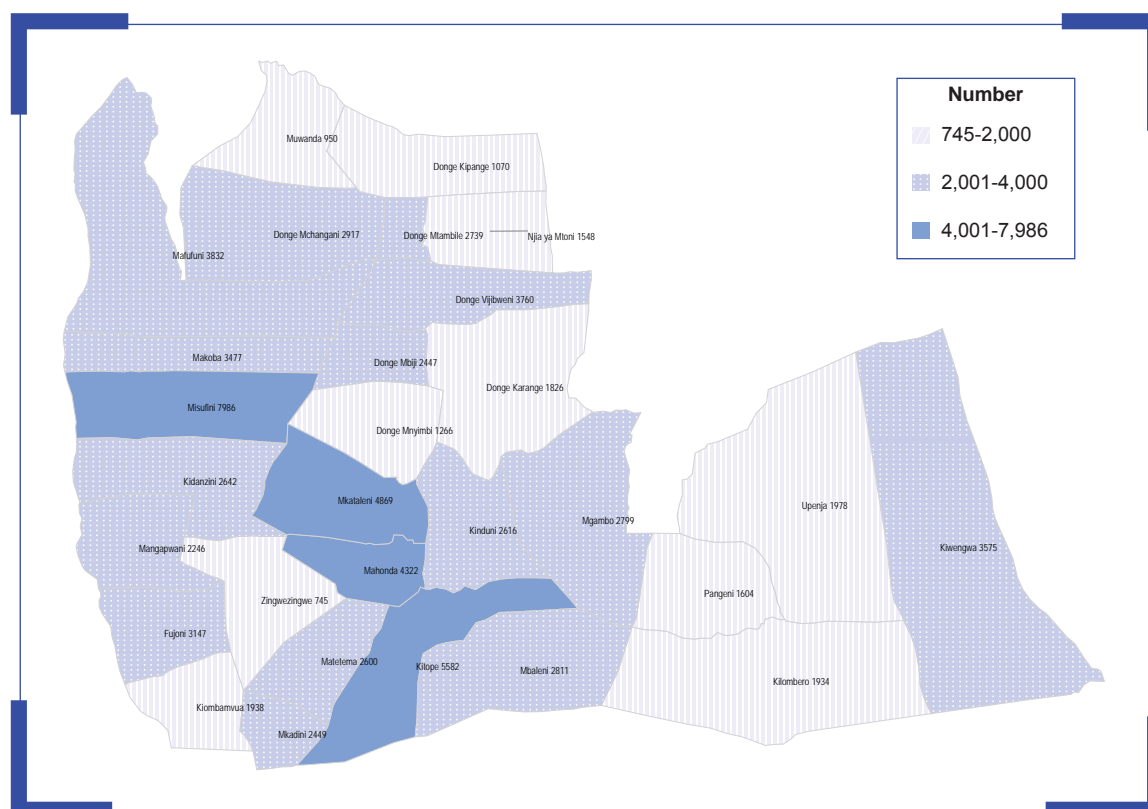

Population characteristics

2 Population characteristics

According to the Population Census of 2012, Kaskazini B district has a total population of 81,675, which is equivalent to 6.2 per cent of Zanzibar's population. Other demographic indicators are presented below.

2.1 Population distribution, by shehia

Figure 1: Map of Kaskazini B – Population distribution

Source: Population and Housing Census, 2012.

Figure 1 shows population distribution in Kaskazini B district by shehia. The distribution of people in shehias within the district is not uniform. For instance, Misufini shehia has 7,986 people, which is the highest population size in the district. This is followed by Kitope, with 5,582 people. Kiongwé Kidogo shehia has 391 people, which is the lowest number in any shehia in the district.

2.2 Population distribution, by sex, number of households and average household size

Household size refers to the number of people living in the same house who share meals and/or accommodation space. Table 2 shows population distribution by sex, number of households and average household size in different shehias in the district and Figure 2 shows the distribution of households in the district by shehia.

Table 2: Population of Kaskazini B district, by sex, average household size and sex ratio

| S/N | Shehia | Both sexes | Male | Female | Number of households | Average household size | Sex ratio |

 Overall average household size in Kaskazini B is 4.8

2.3 Other population indicators

Table 3 provides a summary of statistics on population growth, population density, sex ratio and age dependency ratio. As indicated in the table, the population density of the district is 380 persons per square kilometre; the sex ratio is 99; and the age dependence ratio is 86.

Table 3: Population indicators

| Indicator | Value |
|---|--------|
| Population growth rate | 3.2 |
| Population density | 380/km |
| Average household size | 5 |
| Age dependency ratio | 86 |
| Sex ratio | 99 |
| Proportion of population below 15 years | 42.1 |

Source: Zanzibar Household Budget Survey, 2014/15; Population and Household Census, 2012.

Chapter 3

Economic sectors

3 Economic activities

The main economic activities of the district include: agriculture, forestry, fishing, hunting, livestock, mining and quarrying, manufacturing, services, construction, merchandise trade, hotels and lodges, and provision of other services such as financial and insurance. These sectors contribute in different ways to the district's economy.

3.1 Hospitality

Kaskazini B district is endowed with a large beach area. This has become a great attraction, leading to the establishment of many hotels. Table 4 provides a list of these hotels. The class of each hotel is also given. Hotels and guest houses are available in 3 out of 31 shehias, as of 2015.

Table 4: Hotels located in the district

Note: The stars/asterisks indicate the categories/ratings of hotels and guest houses.

3.2 Major occupations

Basically, household occupations in this region can fall into two categories – agriculture or business. Despite fishing being one of the main activities in the district, it is very rare for a person to engage solely in fishing without being active in either agriculture or business. Table 5 indicates

the number of households engaged in either agriculture or business. Thirty out of 31 shehias are witness to agricultural activities.

Table 5: Major occupations

3.3 Agriculture

Major crops produced within the district are paddy, sweet potato, cassava, yam, millet, banana, and different varieties of fruit and vegetables. Available statistics depict a relatively low level of productivity, especially when the district is benchmarked against other crop-producing areas. A very good example here is paddy. Given the nature of consumption in the island, paddy (rice) is considered a priority crop by the government.

However, the land area under crop production has been declining over the years due to various factors, such as increasing encroachment on farmland caused by high population, coupled with a growth in demand for better housing. Rising seawater is yet another factor. This is among the major determinants of the future of agriculture.

Crop production is practised mostly under a rain-fed irrigation system, although efforts to develop other methods of irrigation still continue. Most households practise a mixed farming system. As will be shown later in this profile, the number of households that own livestock, especially cattle, has been increasing over the years. Despite such an increase, there is no indication as to whether farmers have managed to improve soil fertility through the use of animal manure, which is easily available and could help increase soil fertility, and therefore, farm productivity.

Land preparation is primarily practised using hand hoes, draught animals and tractors. Use of tractors for land preparation is a common practice, especially because the government provides subsidy for paddy production, which covers this provision as well.

Table 6: Crop production

| S. No. | Shehia | Crop production (in MT) | | | | | |

3.3.1 Provision of extension services

The government provides extension services through staff deployed across different shehias within the district. The district has a total of 20 staff; of whom one has a diploma, seven have certificates in agricultural production and nine have a certificate of secondary education (Form IV). Table 7 provides the deployment of these staff members in different shehias. Extension staff are shared among shehias.

3.3.2 Agricultural development projects

Various projects have been implemented within the district to develop agriculture and improve household food security, income and nutrition levels. These projects are either implemented by the government, or through a development partner, or collaboratively. A list of such projects is provided in Table 8 with their corresponding geographical area.

Table 8: Agricultural projects in the districts

| S. No. | Name of the project | Objective | Shehia | Period |
|--------|---|--|--|-----------|
| 1 | Marketing Infrastructure, Value Addition and Rural Finance (MIVARF) | Developing and strengthening agricultural marketing systems | Donge | 2014–2017 |
| 2 | Cassava Statistics | Developing a data system for cassava | All shehias | 2014–2015 |
| 3 | Farm Concerning International | Strengthening the agricultural marketing system | | 2014–2017 |
| 4 | Agricultural Sector Support Programme (ASSP)P) | Promoting good agricultural practice | All shehias | 2008–2016 |
| 5 | ACAI | Promoting mixed cropping of cassava and sweet potato | Donge Vijibweni, Kilombero, Misufini, Mbaleni, Kitope, Mahonda, Matetema and Donge Pwani | 2016–2019 |
| 6 | Umoja wa wakulima wa matunda na mboga mboga Zanzibar (UWAMWIMA) | Promoting good agricultural practices for banana, cassava and sweet potato crops | Kitope | |
| 7 | Fast racking | Seedling propagation of sweet potatoes | In all shehias except Kitope and Donge Mtambile | 2014–2017 |

Source: Kaskazini B district, 2015.

Available information shows that residents within this district rear animals such as cattle, goats, pigs, chicken, ducks, turkeys, rabbits and donkeys. Statistics show that the number of households that own livestock has been fluctuating yearly; the highest was in 2009/10 and the lowest was in 2004/5, as seen in Table 9. In 2009/10, an average of 10.5 households owned livestock. Livestock such as cow and donkey are commonly used to provide draught power. Table 9 shows the distribution of households by ownership of livestock within the district.

Table 9: Distribution of households by livestock ownership

| District | Large livestock | | Medium livestock | | |
|-------------|-----------------|---------|------------------|---------|---------|
| | 2004/05 | 2009/10 | 2004/05 | 2009/10 | 2009/10 |

| Zanzibar | 100 | 100 | 100 | 100 | 100 |

Source: Zanzibar Household Budget Survey, 2009/10.

Livestock rearers are supported by the government through the provision of public goods such as extension services as well as vaccinations. Veterinary drugs against various diseases are supplied by the private sector within the district. The district has two suppliers. Besides these, the district has two animal health centres and provides primary animal health care through trained community animal health workers. This constitutes an attempt to reduce the effects of insufficient livestock extension officers within the district. Popular animal diseases threatening the district are diseases such as anthrax, black quarter, East Coast fever, pneumonia, mastitis, otitis, worms as well as foot and mouth disease (FMD), mostly affecting cattle. Meanwhile, birds are often affected by fowl pox, Newcastle diseases, worms and coccidiosis. The availability of drugs to combat some of these diseases is still a challenge within the district.

3.4 Livestock

3.4.1 Livestock development projects

Livestock development projects implemented within the district are shown in Table 10.

Table 10: Development projects

3.5 Fishery

As mentioned earlier in this report, Kaskazini B has coral land, which is mostly found along the coastal area, especially in the west and east. The coral land provides a good habitat for fish, making fishery an important sector within the district. The fishery sector offers employment to many people throughout the value chain. In addition to that, fish is another major source of protein for residents within and beyond the district. The district has three centres for tracking and recording fishing catches. These centres are located in Kidazini, Kiwengwa and Mangapwani shehias. Table 11 shows the estimated amount of fish caught in different shehias in a year.

Table 11: Fish catches

3.5.1 Fishery centres

There are 10 fishery centres where data related to the amount and types of fish caught is collected within the district. However, as in other districts, there is the challenge of unofficial landing sites. Unofficial landing sites create a problem in data collection.

Table 12: Fishery centres

3.6 Housing conditions

The condition of houses in the district is indicated by the roofing materials used. Some houses use iron sheets, which are considered to make better quality houses, while others use locally available palm leaves. Misufini shehia has the highest percentage of houses roofed by iron sheets in the district. Only five shehias in the district have less than 70 per cent of houses roofed by iron sheets. These shehias are Kiongwe Kidogo (33 per cent), Kisongoni (36 per cent), Kilombero (22 per cent), Mbaleni (69 per cent) and Kwagube (57 per cent).

Table 14: Housing condition based on building material

Chapter 4

Social services

4 Social services

This chapter covers social services, which include education, water and sanitation, and social protection.

4.1 Education

4.1.1 Schools within the district

Kaskazini B has a total of 12 secondary schools, 20 primary schools and 19 pre-primary schools. The type and number of schools by shehia is presented in Table 15.

Table 15: Students and teachers by school type

| S. No. | Shehia | School | School | | | No. of students | | No. of teachers | |
|--------|-----------------|-------------|-------------|---------|-----------|-----------------|--------|-----------------|--------|

4.1.2 Enrolment in basic, primary and secondary schools

Enrolment percentages show the proportion of children enrolled in schools at different levels. Net enrolment ratio (NER) indicates the percentage of the specific ages of the enrolled children and that of the school ages considered. Gross enrolment ratio (GER) shows the level of enrolment in schools, regardless of the ages of the enrolled children. Net enrolment in the district has improved in 2004/5 as compared to 2014/15 – from 79.2, 77.8 and 26.6 to 83.1, 82.5 and 34.2 at the basic, primary and secondary education levels, respectively. The NERs at basic, primary and secondary education in the district are above the national averages in 2004/5, 2009/10 and 2014/15. GERs indicate a decline of the enrolment ratio in 2014/15 as compared to 2004/5 at basic and primary education levels from 99.8 and 115.1 to 95.7 and 100.7, respectively. However, GER at the secondary education level in the district has improved from 36.7 in 2004/5 to 42.5 in

2014/15. In 2014/15, GERs at basic, primary and secondary education were below the national averages by 1.4, 0.8 and 7.4, respectively. Table 16 presents the GER and NER in schools at different levels in the district.

Table 16: Primary school enrolment

| | | Net enrolment ratio | | | Gross enrolment ratio | | |
|---------------------|-------------|---------------------|---------|---------|-----------------------|---------|---------|
| | | 2004/05 | 2009/10 | 2014/15 | 2004/05 | 2009/10 | 2014/15 |

| Secondary education | Zanzibar | 33 | 46 | 40 | 42 | 54 | 50 |

Source: Zanzibar Household Budget Survey, 2014/15.

The Gender Parity Index (GPI) measures the relative access to education of males and females. In its simplest form, it is calculated as the quotient of the number of females by the number of males enrolled in a given stage of education. The gross enrolment GPI indicates that in 2012, the enrolment of girls and boys in primary school in the district was equal and similar to the national average. On the other hand, slightly fewer girls were enrolled in pre-primary with a GPI of 0.98 as compared to that of the national of 1.05. In secondary school, more girls were enrolled, with a GPI of 1.57 against the national level of 1.05.

Table 17: GER, GPI for the GER and percentage share of private enrolment, by district and level

| District | Pre-primary | | | Primary | | | Ordinary (Form 1–4) | | Secondary |
|-------------|-------------|---------|-------------------|---------|---------|-------------------|---------------------|---------|-------------------|
| | GER | GER GPI | Private enrolment | GER | GER GPI | Private enrolment | GER | GER GPI | Private enrolment |
| Kaskazini B | 9.5 | 0.98 | 42.3 | 76.4 | 1.00 | 0.0 | 46.2 | 1.57 | 0.0 |
| Zanzibar | 26.5 | 1.05 | 75.9 | 98.9 | 1.00 | 6.3 | 68.4 | 1.09 | 7.6 |

Source: Ministry of Education and Vocational Training, 2014.

4.1.3 Accessibility to schools

In accordance with the Household Budget Survey 2014/15, 95.7 per cent and 87 per cent of the children walk to primary and secondary schools, respectively. The other means of transport used by children to go to schools include bikes, private cars and public cars.

Table 18: Mode of transport to school

| | Walking | Bike | Private vehicle | Public vehicle | Total |
|----------------|---------|-------|-----------------|----------------|---------|
| Primary (%) | 95.7 | 0.3 | 2.5 | 1.5 | 100 |
| Zanzibar (%) | 92.6 | 2.1 | 2.1 | 3.3 | 100 |
| Total children | 255,392 | 5,684 | 5,848 | 8,968 | 275,892 |
| Secondary (%) | 87 | 2.4 | 2.8 | 7.7 | 100 |
| Zanzibar (%) | 77.4 | 5.5 | 3.4 | 13.7 | 100 |
| Total children | 72,164 | 5,119 | 3,155 | 12,789 | 93,227 |

Source: Zanzibar Household Budget Survey, 2014/15.

Other indicators that show accessibility to primary and secondary schools in the district are mean distance to the nearest school and distribution of households by distance to the nearest school. Table 19 shows the average distance to the nearest school in the district. The average distance to the nearest primary and secondary school has improved in 2009/10 – from 1 km and 1.9 km to 0.4 km and 0.8 km, respectively. This means that children walked shorter distances to schools in 2009/10 as compared to distances reported in the 2004/05 Household Budget Survey. The mean distance to the nearest primary school in the district is better than the national average. Children in the district had to walk a longer distance to secondary school in 2004/05 as compared to the national average. However, the average distance to secondary school in 2009/10 was equal to the national average.

Table 19: Mean distance to nearest school

| | Primary school (km) | | Secondary school (km) | |
|-------------|---------------------|---------|-----------------------|---------|
| | 2004/05 | 2009/10 | 2004/05 | 2009/10 |
| Kaskazini B | 1 | 0.4 | 1.9 | 0.8 |
| Zanzibar | 1 | 0.5 | 1.8 | 0.8 |

Source: Zanzibar Household Budget Survey, 2009/10.

The distribution of household by distance to the nearest primary school indicates that in 2009/10, about 80 per cent of the households in the district were within a kilometre as compared to the national average of 65.7 per cent. Only 0.4 per cent of households in the district are more than 3.9 kms from the nearest primary school.

Table 20: Distribution of households by distance to the nearest primary school

4.1.4 Teachers

Table 21 shows the number of unqualified teachers in secondary schools in the district. Two of the secondary schools in the district – namely, Upenja and Karume – have no unqualified teachers. The pupil-teacher ratio varies widely across secondary schools in the district, from 7:1 to 37:1. However, the ratio in all the schools except Kiyongwe is within the recommended level of 35:1.

Table 21: Selected indicators for teachers in secondary schools

| S. No. | Shehia | Secondary school | % of unqualified teachers | Pupil-teacher ratio |
|--------|-------------|------------------|---------------------------|---------------------|

Table 22 shows that nine primary schools – Kilombero, Upenja, Kiyongwe, Kitope, Makoba, Bumbwini, Mahonda, Fujoni, Donge Kipande and Mangapwani – had unqualified teachers ranging from 3 to 26 in number. The pupil-teacher ratio (PTR) varies widely across primary schools in the district from 8:1 to 38:1, which are within the recommended level of 40:1.

As indicated in Table 23, all pre-primary schools in the district had qualified teachers according to the 2013 statistics. The PTR in pre-primary schools in the district varies from 11:1 to 38:1, and three of the schools – Kiwengwa, Kilombero and Bumbwini – have a ratio beyond the recommended level of 25 pupils to one teacher.

4.1.5 School facilities

The pupil–classroom ratio (PCR) indicates the average number of pupils in a classroom and establishes whether there are sufficient classrooms to accommodate pupils. Table 24 shows the PCR ratios in pre-primary schools in the district range from 5 to 67 pupils. Only three out of the eight pre-primary schools in the district have pupils within the recommended number. The pupil–latrine ratio (PLR) shows the number of latrines available for use by the pupils in a school. The recommended number is one latrine for 45 girls and 50 boys. The PLR in pre-primary schools in the district varies from 9 to 39 for boys, and 8 to 56 for girls. All pre-primary schools except Donge have sufficient latrines for both boys and girls.

Table 24: Selected indicators for facilities in pre-primary schools

| S. No. | Shehia | Pre-primary school | Pupil–latrine ratio | | Pupil–classroom ratio |

| | Overall status for Zanzibar | | 27 | 25 | 18 |

Source: Ministry of Education and Vocational Training, 2014.

The PCR ratios in primary schools in the district range from 27:1 to 105:1 while the national average is 58:1. Only 4 out of the 18 primary schools in the district have pupils within the recommended level of 40:1. As shown in Table 25, the PLR in primary schools in the district varies from 28 to 313 for boys, and 27 to 358 for girls. All primary schools except Matetema and Dongwe Kipande have insufficient latrines for both boys and girls.

Table 26 shows that the average number of pupils in a classroom in secondary schools in the district is between 5 and 94. Only two secondary schools in the district – Bumbwini and Mahonda – have pupils beyond the recommended number. The PLR in secondary schools in the district varies from 6 to 100 for boys, and 12 to 148 for girls. Thus, all secondary schools in the district have insufficient latrines for both boys and girls, except three – Kiwengwa, Upenja and Mgambo.

4.1.7 Performance in schools

This subsection provides information on performance in examinations in primary and secondary schools in the district. The overall pass rates achieved by primary schools in the district in Standard VII examinations ranged from 63 per cent to 100 per cent, whereby all the primary schools attained pass rates above the national average. In such examinations, the girls' pass rate in different schools in the district was between 74 per cent and 100 per cent while the national rate was 83 per cent. In contrast, the boys' pass rate ranged from 40 per cent to 100 per cent while the national rate was 79 per cent.

Table 28: Standard VII pass rate, by school and school ranking in terms of pass rate

In secondary schools, the performance of the pupils in Form II examinations in the district ranged from 42 per cent to 100 per cent. As shown in Table 29, about 48 per cent of the secondary schools achieved pass rates above the national average (56 per cent). The pass rates for girls and boys were between 17 per cent and 100 per cent for girls, and between 19 per cent and 100 per cent for boys

4.2 Sources of drinking water

Water sources can be classified as 'improved' or 'unimproved'. Sources considered as improved are piped water into homes, public stand pipes, boreholes, protected wells, protected springs and

rainwater harvesting. Unimproved water sources include unprotected wells and springs, rivers and streams, and vendors and tanker trucks. The analysis focuses on availability and accessibility to water by households within the district.

4.2.1 Distribution of the main water sources

Table 30 shows the distribution of households by the main sources of drinking water in the district. The main sources of drinking water for most households in the district are piped water, tube well/ boreholes, protected dug wells and springs, accounting for 86 per cent of households. Eight out of every 10 district households use piped water as the main source of drinking water.

Table 30 further shows that less than a quarter (14 per cent) of district households use unimproved water for drinking, compared to 86 per cent of those using improved water. Unprotected wells and river/stream are the main sources of water for 10.9 per cent and 2.5 per cent of households in the district, respectively.

Table 30: Distribution of households by main source of drinking water

| | | Kaskazini Unguja | Kaskazini B |
|---------------------------------------|---------------------------------------|------------------|-------------|
| | Total | 36,736 | 16,214 |

Source: Zanzibar Household Budget Survey, 2014/15.

Furthermore, Table 31 indicates the number and percentage of households connected to water pipes in each of the shehias in the district. Two shehias – Mgambo and Kiwengwe – have no single household connected to piped water supply. The shehia of Mnyimbi has the highest percentage of households with piped water supply in the district, which is 93.2 per cent. Kiwengwa and Mgambo are the two shehias that are not connected to piped water supply at all.

Table 31: Households connected to piped water supply

4.2.2 Distance to clean drinking water

Distance to a clean water source is one of the most important aspects of water supply and impacts consumption and hygiene practices. According to the Household Budget Survey 2014/15, the percentage of households within less than 1 km from a drinking water source during the dry season has improved from 85.1 per cent in 2004/5 to 96.3 per cent in 2014/15, as shown in Table 32.

Table 32: Distribution of households by distance to drinking water in dry season

| Distance in km | 2004/05 | 2009/10 | 2014/15 |
|----------------------|---------|---------|---------|
| Less than 1 | 85.1 | 71.9 | 96.3 |

4.3 Sanitation

4.3.1 Toilet facilities

Table 33 shows the number and percentage of households having toilets in each of the shehias in the district. Six shehias (Mafufuni, Kiongwe Kidogo, Kilombero, Mahonda, Kiombamvua, and Mangapwani) in the district have less than 50 per cent of households with toilets.

Table 33: Households with toilet

Source: Kaskazini B district, 2014.

According to the Household Budget Survey 2014/15, the most common form of toilet facility used in the district is the pit latrine. The percentage of households using flush toilets has increased from 6.6 per cent in 2004/05 to 26 per cent in 2014/15. This increase corresponds to a decrease in the percentage of households without toilets that use the seashore instead. The second most common toilet facility used in the district is the flush toilet, accounting for 26 per cent of households. The ventilated improved pit (VIP) is the third most used toilet facility in the district. One in 20 (5.3%) households use a VIP.

4.4 People living in vulnerable circumstances

4.4.1 Violence against children

Children are vulnerable to crime as victims and are more likely to suffer abuse silently because of their inability to protect themselves. A study undertaken on gender-based violence by the Tanzania Media Women's Association (TAMWA, 2014) shows that rape, early pregnancies and child marriages are rising at an alarming rate in Zanzibar – there were 996 cases reported in 2012/13 as compared to 398 in 2011. As part of the government's effort, Zanzibar enacted the Children's Act in 2011 and has rolled out gender and children desks in police stations to curb the increasing incidence of sexual assaults against women and children. These gender desks are special units in each police station, consisting of a reception, interview and counselling room, rest area and an office where victims can report cases of physical and sexual abuse to trained police officers.

Table 34 shows a decrease in reported crimes against children. It is, however, not clear whether the decrease is due to fewer crimes, or lower reporting, or both. The table shows that although there has been higher reporting in child violence and abuse cases, the level of conviction is very low. In 2011, 31 cases of child abuse were reported at the child desk; however, only half of them were taken to court with only one successful conviction. In subsequent years, 2012, 2013, 2014 and 2015, there were no convictions.

Table 34: Child police desk cases, 2011–2015

4.4.2 Children living in vulnerable circumstances

Table 35 shows the number of children living in vulnerable circumstances in eight shehias – Donge Mbiji, Kiongwe Kidogo, Donge Vijibweni, Kilombero, Kinduni, Mafufuni, Makoba and Misufini. According to a survey conducted by the district in 2014, 1,455 children are living in vulnerable circumstances in the district.

4.5 Poverty

4.5.1 Basic needs poverty

According to the 2014/15 Zanzibar Household Budget Survey, incidence of poverty declined only marginally from 26.2 per cent in 2009/10 to 23.3 per cent in 2014/15. This means that poverty declined by 3 per cent only.

Table 36: Basic needs poverty

| | Poverty headcount rate | | | Distribution of the poor | | |
|-------------|------------------------|---------|--------|--------------------------|---------|--------|
| | 2009/10 | 2014/15 | Change | 2009/10 | 2014/15 | Change |
| Kaskazini B | 26.3 | 23.3 | -3 | 4.3 | 4.1 | -0.2 |
| Zanzibar | 34.9 | 30.4 | -4.4 | 100 | 100 | 0 |

Source: Zanzibar Household Budget Survey, 2014/15.

4.5.2 Food poverty

Food poverty refers to the inability to obtain adequate and nutritious food. Table 37 shows that the level of food poverty in respect to the head count rate was 7 in 2014/15, compared to 6.9 reported in the 2009/10. This means that food poverty did not change from what was reported in the previous Household Budget Survey (2009/10). The level of food poverty declined from 11.7 to 10.8, suggesting an improvement in welfare.

Table 37: Food poverty

| | Poverty headcount rate | | | Distribution of the poor | | |
|-------------|------------------------|---------|--------|--------------------------|---------|--------|
| | 2009/10 | 2014/15 | Change | 2009/10 | 2014/15 | Change |
| Kaskazini B | 6.9 | 7 | 0.1 | 3.3 | 3.5 | 0.1 |
| Zanzibar | 11.7 | 10.8 | -0.9 | 100 | 100 | 0 |

Source: Zanzibar Household Budget Survey, 2014/15.

4.6 Social protection services

According to the 2012 Census, there were 4,055 people aged 60 years and above in the district. This is equivalent to 5 per cent of the total population in the district. About 96 per cent of these older people in Kaskazini B are located in rural areas. Table 38 presents the old age population in the district by gender and age group.

Table 38: Old age population

| Age group | Total | | |
|--------------|--------------|--------------|--------------|
| | Male | Female | Total |
| 60–64 | 752 | 659 | 1,411 |
| 65–69 | 445 | 357 | 802 |
| 70–74 | 414 | 423 | 837 |
| 75–79 | 229 | 173 | 402 |
| 80–84 | 276 | 327 | 603 |
| Total | 2,116 | 1,939 | 4,055 |

Source: Population and Housing Census, 2012.

The following subsections provide details of social protection services offered in the district, which include the small cash transfer scheme, universal pension scheme and productive social security net.

4.6.1 Small Cash Transfer Scheme

The government runs a Small Cash Transfer Scheme for people of 60 years and above, which is administered at the community level. Recipients receive a monthly payment of TSh 5,000. The scheme is managed through local shehas, who select potential beneficiaries. The cash is then delivered via social welfare officers. However, a TSh 5,000 cash transfer is not sufficient to meet even one-third of the basic needs. In addition, the scheme has a fixed budget and those in need can only be added to the scheme if an existing beneficiary passes away.

4.6.2 Universal Pension Scheme

Following a recommendation from the ILO Social Protection Expenditure Review of 2010, the Department of Social Welfare (DSW) of Zanzibar implemented a Universal Pension Scheme (ZUPS) targeted at providing income security to old persons. The scheme covers all Zanzibar residents aged 70 years and above. The first payment of the scheme for 21,263 old persons was made in April 2016, with each person receiving a monthly pension of TSh 20,000.

4.6.3 Productive Social Safety Net

In 2013, the Tanzania Social Action Fund (TASAF) introduced the Productive Social Safety Net (PSSN) programme, which involves conditional cash transfers targeting people who are extremely poor or most vulnerable. The PSSN is aimed at protecting such people from the severest consequences of poverty by enabling them to purchase food, pay for medical care (including paying contributions to the Community Health Fund) and support school-going children. Targeted households with children or pregnant women are also eligible for such conditional transfers if they comply with conditions focused on the use of educational and health services. Eight shehias in Kaskazini B district are involved in the PSSN programme covering a total of 2,628 households, as shown in Table 39. Thus, the PSSN programme covers only approximately 35 per cent of shehias in the district.

Table 39: Households covered by the PSSN programme

| S. No. | Shehia | Number of households targeted | Households | % of targeted households |
|--------|-----------------|-------------------------------|------------|--------------------------|
| 1 | Donge Mbiji | 123 | 478 | 26 |

4.7 Basic health indicators

In this subsection, various indicators are used to describe the status of health services within the district.

4.7.1 Number of health centres, private and public health facilities

Kaskazini B district has a total of 15 primary health care units (PHCUs). The list includes Donge Mchangani, Donge Vijibweni, Fujoni, Kiombamvua, Kiongwe, Kitope, Kiwengwa, Mahonda. Makoba, Misufini, Upenja, Zingwezingwe, Kitope Dispensary RC (Private) and Mahonda Medical Clinic (Private). Two of these PHCUs are owned by the private sector and the rest are owned by the government. Available data shows that mean distance to a health facility is 2.5 km, which is generally considered not very far.

Table 40 shows the total number of health personnel in each facility. As seen, there is a wide variation in the total number of health personnel per facility with Mahonda PHCU having the most personnel, followed by the Misufini and Donge Vijibweni facilities. This difference is not only noticeable in the total number of personnel, but also in the type of professionals. However, the comparison of the status of health personnel in health facilities has not taken the catchment population into account.

Table 40: Personnel per health centre

| Distribution of health workers by qualification | | | | | | | | | | | | | | |
|---|-----------------|---------------------------------|------------------|--------------------|-------------------|---------------|-------------|---------|------------|----------------|-------------------------|----------------|--------|-------|

4.7.2 Educational level of health workers

The educational level of health workers may determine the quality of service delivery within an area. If health workers have a relatively high level of education, they may be able to render service more effectively and efficiently. Conversely, if the education level is relatively low, then the quality of service provided within their area may not be up to the required standards. In view of that, the education of health workers is a matter of policy concern. Table 41 shows the type of professionals and their level of education. As shown in the table, there is no medical practitioner or assistant medical officer available within the district.

Table 41: Education level of health staff

| Education level | Male | Female | Total |
|-------------------------------------|----------|-----------|-----------|
| Medical practitioner/ Local (MD) | 0 | 0 | 0 |
| Assistants medical officer (AMO) | 0 | 0 | 0 |
| Medical assistant/ Clinical officer | 2 | 2 | 4 |

| Total | 8 | 12 | 19 |

Source: Kaskazini B district, 2016.

4.7.3 Immunization

The overall status of child immunization in 2015 and 2016 is provided in Table 42. This service has been provided in 14 health facilities within the district. The table shows that health facilities in shehias of Fujoni, Kiombamvua, Kiwengwa and Mafufuni could not meet the target of 90 per cent coverage with respect to BCG, full immunization, Penta3 and measles in the two years. Generally, the coverage in these health facilities is far below the target levels. However, the coverage in the other health facilities was above 100 per cent, which may imply that there were errors in the estimation of the targeted population for the district's facilities.

Table 42: Immunization coverage of children under one year

4.7.5 HIV and AIDS

Overall, Zanzibar has a concentrated epidemic with 1 per cent of the general population affected (THMIS 2012) and more than 2 per cent among key populations – namely, people who inject drugs (11.3 per cent), female sex workers (19 per cent) and men who have sex with men (MSM) (2.6 per cent) (IBBSS 2012). HIV prevalence in North Unguja, which also includes Kaskazini B district is 0.1 per cent (THMIS 2012). In Zanzibar, about 314 new infections have been estimated to occur yearly; the highest proportion is contributed by stable heterosexual relationships (35.0 per cent), followed by clients of sex workers (28.6 per cent), people who inject drugs (PWID) (10.8 per cent) and partners of PWID (6.7 per cent). The other subpopulations that contribute to a higher proportion of the new HIV infections are partners of those having casual heterosexual sex (6.5 per cent), MSM (3.7 per cent) and partners of sex workers' clients (2.3 per cent). None of the new HIV infections are from blood transfusions. This model also suggests that Zanzibar is characterized by a mixed epidemic, whereby new HIV infections are equally contributed by the general population and the key populations (Zanzibar HIV transmission model – ZIHTLP 2012).

Data from the Ministry of Health (2016) shows that a total of 3,588 individuals were tested for HIV, of which 46 were found to be HIV-positive (1.3 per cent).

4.7.6 Health facility utilization

Table 44 shows the level of health facility utilization in the district. The table indicates that there is high variation in the level of utilization of health facilities within the district. For example, utilization

rates by all ages are not comparable with the utilization rates for under-5-year-old children (all services) in almost all health facilities.

Table 44: Health facility utilization

| S. No. | Shehia | Health facility | Out patients department (OPD) | | | | | | | | |
|--------|-----------------|----------------------------|-------------------------------|--------|--------|-------------------------------|------|------|------|------|-----|

4.7.8 Family planning

Family planning is very essential for the establishment of a manageable family size. Table 46 provides the percentage of new family planning acceptance by shehia within the district.

Table 46: New family planning acceptance rate

| S. No. | Shehia | Health facilities | New client (%) | |
|--------|-----------------|-------------------------|----------------|------|
| | | | 2014 | 2015 |
| 1 | Donge Mchangani | Donge Mchangani PHCU | 5.9 | 4.9 |
| 2 | Donge Vijibweni | Donge Vijibweni PHCU+ | 3.8 | 4.3 |
| 3 | Fujoni | Fujoni PHCU | 3.4 | 3.3 |
| 4 | Kiombamvua | Kiombamvua PHCU+ | 3.8 | 2.1 |

4.7.9 Top 10 causes of morbidity

Table 47 shows statistics on the top 10 diseases that are prevalent in the district. These diseases include upper respiratory tract infections, other skin diseases, ENT, head and neck ailments, diarrhoea, pneumonia, urinary tract infections, intestinal worms, trauma or injuries, dental disease and eye diseases. One medical condition that shows a high rate of incidence within the list is the upper respiratory tract infection. This is followed by incidents of other skin diseases, followed by ENT, head and neck conditions. The contribution of other types of disease is less than 10 per cent. Unfortunately, it was not possible to link this information with specific health facilities or shehia.

Table 47: Top 10 causes of morbidity

| S. No. | Type of disease | Number of patients | Proportion |
|--------|------------------------------------|--------------------|-------------|
| 1 | Upper respiratory tract infections | 16,149 | 0.36 |
| 2 | Other skin diseases | 5,193 | 0.12 |
| 3 | ENT, head and neck conditions | 4,815 | 0.11 |
| 4 | Diarrhoea | 3,793 | 0.09 |
| 5 | Pneumonia | 3,003 | 0.07 |
| 6 | Urinary tract infections | 2,583 | 0.06 |
| 7 | Intestinal worms | 2,574 | 0.06 |
| 8 | Trauma/injuries | 2,261 | 0.05 |
| 9 | Dental diseases | 2,250 | 0.05 |
| 10 | Eye diseases | 1,889 | 0.04 |
| | Total | 44,510 | 1.00 |

Chapter 5

Cross-cutting issues

5 Cross-cutting issues

This chapter provides details on cross-cutting issues, which include environment and energy sources.

5.1 Environment

Environmental concerns in the district include destructive fishing, beach erosion due to sand mining, pollution, and construction too close to the beach, deforestation for construction and fuel wood, land degradation associated with uncontrolled quarrying, and sand mining as well as land encroachment by seawater.

5.2 Sources of energy

Kaskazini B is among the districts of Zanzibar having the lowest proportion of households connected to electricity. The percentage of households with an electricity connection has increased from 7.9 per cent in 2004/5 to 18.3 per cent in 2014/15. This means that 82 per cent of the households in the district have been relying on other sources of energy for cooking and lighting, which include gas, paraffin, charcoal, firewood and candles. According to the 2014/15 Household Budget Survey, the two major sources of energy for cooking in Zanzibar are firewood (61.6 per cent) and charcoal (32.6 per cent). This dependence on firewood and charcoal leads to deforestation and allied problems in the district. Table 48 shows the number and percentage of households with an electricity connection in the district.

Table 48: Households connected with ZECO electricity

| S. No. | Shehia | No. of households | Households with electricity | Households without electricity |
|--------|----------------|-------------------|-----------------------------|--------------------------------|
| 1 | Donge Mtambile | 610 | 91 | 15 |
| 2 | Njia ya Mtoni | 263 | 37 | 14 |
| 3 | Misufini | 1,430 | 137 | 10 |
| 4 | Mafufuni | 1,123 | 45 | 4 |
| | Total | 3,426 | 310 | 9 |

Chapter 6

Priority areas and recommendations

6 Introduction

This chapter identifies areas that the district needs to focus on, given the SWOC analysis of the status of indicators in different sectors. Identification of priority issues in different sectors has also taken into consideration MKUZA III, Zanzibar Vision 2020, sectoral policies, Sustainable Development Goals (SDGs) and objectives of the Revolutionary Government of Zanzibar as stipulated in the 2015 election manifesto of the ruling party - Chama Cha Mapinduzi (CCM). The chapter also provides specific recommendations on the priority areas.

6.1 Priority areas and recommendations

This section presents the proposed priority issues, together with recommendations for each of the main social and economic sectors in the district. The priority issues and respective recommendations are organized sector-wise.

6.1.1 Education

Enrolment of children, both boys and girls, in basic, primary and secondary schools in the district has been improving. However, the main challenges facing the district, particularly at primary and secondary levels, include insufficient facilities such as classrooms, toilets, desks, learning materials, laboratory space and equipment. Also, some schools in the district lack adequate qualified teachers, particularly for science and mathematics. Thus, necessary interventions in the education sector Kaskazini B include the provision of qualified teachers for science and mathematics and the improvement of the learning environment as well as teaching and learning materials.

6.1.2 Health

Critical health issues in the district include a high proportion of births attended by unskilled personnel, shortage of health professionals, limited immunization coverage and relatively high child and maternal mortality rates. Therefore, the district has to increase the proportion of births attended by health professionals, improve immunization coverage, reduce the level of malnutrition among under-5 children, and improve child and women mortality rates.

6.1.3 Agriculture

The key issues in relation to agriculture in the district are modernization of agriculture and enhancement of marketing of agricultural products. The modernization of agriculture should mainly seek to improve productivity and achieve self-sufficiency in food. This requires the promotion of irrigation, provision of agricultural inputs at reduced/subsidized prices, and provision of credit facilities to farmers to enable them to buy agricultural inputs. Rural road networks also have to be developed in order to enhance the marketing of agricultural products.

6.1.4 Fishery

The main concerns related to fishery that the district needs to address include improving productivity and enhancing protection of the marine environment. Productivity can be improved through the extension of fishing to inshore waters and the use of modern fishing gear. Marine environment protection requires the enhancement of the understanding of fishermen about the adverse effects of illegal fishing techniques such as spear fishing, drag netting and dynamiting. Inspection patrols have to be enhanced in order to ensure sustainable fishing activities in the district.

6.1.5 Livestock

Livestock in the district is characterized by very low productivity, mainly due to inadequate provision of animal health services such as the availability of quality and affordable animal feed, lack of veterinary officers, and poor knowledge of people regarding modern livestock rearing. The district has to improve livestock productivity by enhancing livestock services and training given to livestock owners.

6.1.6 Gender and social protection

The main gender and social protection issues of importance in the district are enhancement of the protection of vulnerable groups, particularly women and children, against violence and abuse, and the improvement of access to available social protection schemes for the elderly.

6.1.7 Water and sanitation

The district has inadequate safe and clean water, and drainage and solid waste management facilities are also poor. Safe and clean water supply has to be improved through rehabilitation and the development of new water sources. The treatment and disposal of solid and liquid waste requires further improvement in order to cope with the expansion in human settlements due to urbanization.

6.1.8 Environment

Critical issues related to the environment of the district include the destruction of water sources, destructive fishing, land degradation associated with uncontrolled quarrying and sand mining, deforestation for construction and fuel wood, and land encroachment by seawater.

6.1.9 HIV and AIDS

Residents have to be motivated to attend voluntary HIV and AIDS tests in order to enable the district to generate the best estimate of infected individuals. This will enable the district to promote behaviour change among the population groups that are most likely to be infected by HIV. Also, the district has to allocate more resources to ensure adequate treatment and support for those infected and affected by HIV and AIDS.

6.1.10 Youth empowerment

As the number of youth who are neither in employment nor in education is increasing, there is a need for the district to enhance entrepreneurial awareness and capacity of the youth in order to generate self-employment opportunities. The district has to facilitate accessibility of the youth to soft loans or financing required for investment in various economic activities.

6.1.11 District council

The District Council has to expand its revenue sources by exploring new potential sources and strengthen its revenue collection system in order to mobilize resources required to support improvement in the quality of services delivered to the community in the district.

Appendices

SWOC analysis

| S.No. | Sector | Strengths | Weaknesses | Opportunities | Challenges |
|-------|--------------|---|--|--|--|
| 1 | Agricultural | <ul style="list-style-type: none"> • Presence of diversified crops • Possess some knowledge of good agricultural practice | <ul style="list-style-type: none"> • Lack of adequate and sufficient data on the sector, relatively low level of education among workers, low agricultural productivity, relatively small farm size, low use of modern agricultural inputs, inadequate information system related to production, input availability and use and output market; transport is a problem, as is theft of crops | <ul style="list-style-type: none"> • Existing political will to change the sector, relatively favourable policy environment, growing population and increasing in household disposable income | <ul style="list-style-type: none"> • Lack of well-organized marketing systems for various crops • Emergence of new diseases such as Tuta absoluta • Fruit fly • Encroachment of agricultural land by seawater and settlements, climate change, unreliable market, overreliance of rain-fed farming and insufficient water for open surface irrigation. There is no primary agro-processing |
| 2 | Livestock | <ul style="list-style-type: none"> • Available knowledge on livestock keeping • Presence of wide range of livestock type, use of Community Animal Health Support system | <ul style="list-style-type: none"> • Inadequate data on the variety subsector • Low level of education among the staff, weak system of animal husbandry, hence low productivity | <ul style="list-style-type: none"> • Existing level of knowledge of livestock keeping • Presence of market, technologies that can support intensive livestock keeping, political will to | <ul style="list-style-type: none"> • Problem of grazing land • Lack of adequate education on modern livestock rearing • Spread of diseases such as Heartwater, East Coast Fever • Absence of designated |
