DNA sample number: Hydrozoa DNA126	
Sample data	Taxonomy
collection locality: New Zealand, Hauraki Gulf, Devonport, Narrow Neck Beach	Phylum: Cnidaria Class: Hydrozoa Family: Laodiceidae Species: <i>Staurodiscus gotoi</i> (Uchida, 1927) life stage: medusa identified by: P. Schuchert size: 5-10 mm
GPS: 36.8123°S 174.8025°E	
collection date: 26.07.2002	
depth: 0-2 m	
gear: plankton net	
number of individuals collected : >30	
preservation: 95 % ethanol	
figured specimen used for DNA extraction: no	
part used for DNA extraction: whole medusa	
DNA extraction: 09.10.2002	
voucher specimens deposited: MHNG-INVE-33467	

comments:

DNA degraded, high concentration

Genbank accession numbers:

16S sequence FJ550472

18S sequence FJ550535

28S sequence FJ550391

note: photographed animals (like majority of specimens) are subadult, few more advanced individuals had developed interradial tentacles (thus 8 tentacles total)
